Brand Scaling: SEO, AEO and AGO Plan

brandscalinghacks.com, DTC ecommerce growth agency (Meta and TikTok ads, Shopify CRO, direct-response creative), Start: Thu 22 Oct 2026

1. Summary

- Goal: turn brandscalinghacks.com from a JavaScript-only showcase into an indexable lead engine that ranks in the US (then UK, CA, AU) for agency buyer terms and for the Meta ads research terms that DTC founders search before they hire, and that AI assistants name when asked "who can scale my Shopify brand on Meta".
- Strongest keywords (Google search data, United States, pulled 22 Oct 2026): "meta ads library" 90,500 searches a month, +124% a year, difficulty 7; "meta ads" 49,500 a month, +70% a year (difficulty 54, long-term target); "performance marketing agency" 2,900 a month, +87% a year, difficulty 0, CPC $37.17.
- Two more fast wins: "what is roas" (3,600 a month, +17%) which links to the ROAS calculator the site already has, and "meta andromeda" (1,300 a month, +295% a year) where few agencies have a practical explainer yet.
- The biggest blocker is technical, not content: every URL returns the same empty HTML shell (one title, one canonical pointing to the home page, an empty root div). Google has to render JavaScript to see anything, and before it does, all 129 URLs look like copies of the home page. Prerendering every route to static HTML is task number one.
- Built first (by Fri 13 Nov): one canonical domain, prerendered pages with their own title, meta, canonical and H1, crawlable links, a real 404, a clean sitemap, the BFCM post (live Tue 3 Nov), the updated home page and /growth, the new /shopify-agency page, entity and schema setup, and llms.txt.
- Content engine from Mon 16 Nov: 9 more posts and pillars in the calendar, one each Tuesday, starting with the Meta Ads Library pillar that embeds Gaurav's new YouTube video "Meta Ads Library: How to Find Winning Ads in 2026".
- Success at the end of Month 4 (Fri 5 Feb 2027), estimates: all key pages indexed, 12 or more keywords in the US top 10, "performance marketing agency for ecommerce" and long-tail Meta Ads Library questions on page 1, 1,500 or more organic clicks a month, 6 or more organic discovery-call bookings a month, and Brand Scaling named in at least 3 of the 12 tracked AI prompts.

2. How to start: step by step

Owner abbreviations: SEO = SEO lead, DEV = developer with Vercel and repo access, WR = writer, DES = designer.

Day	Task	How to do it	Done when
Thu 22 Oct	Baseline export	Search Console > Performance > Search results: set date to last 16 months, export queries and pages to a sheet. Search Console > Indexing > Pages: export the "Not indexed" list with reasons. GA4 > Reports > Acquisition > Traffic acquisition: filter Organic Search, note sessions and key events for the last 90 days.	Baseline sheet saved with clicks, impressions, indexed count and organic leads.
Thu 22 Oct	See what Google sees	Search Console > URL Inspection: inspect /growth and one /cases/ URL, click "Test live URL" then "View tested page" > HTML and Screenshot. Also open view-source on the live site and confirm the body is only an empty root div.	Screenshots of rendered vs raw HTML saved in the tracker.
Fri 23 Oct	Pick one canonical domain	The apex brandscalinghacks.com currently 308 redirects to www, but the canonical tag, sitemap, robots.txt, Open Graph tags and schema all use the apex. Vercel > Project > Settings > Domains: set brandscalinghacks.com as the primary domain and set www to redirect (308) to it.	curl -I on https://www.brandscalinghacks.com/growth returns 308 to https://brandscalinghacks.com/growth, and the apex returns 200.

Day	Task	How to do it	Done when
Fri 23 Oct	Search Console property check	Make sure a Domain property exists for brandscalinghacks.com (covers apex and www). Add Settings > Users for the SEO team. Link GA4 to Search Console in GA4 > Admin > Product links.	Domain property shows data; GA4 shows the Search Console reports.
Mon 26 Oct	Prerender every route	In the Vite React repo, add build-time prerendering (for example vite-react-ssg, or a prerender step that renders each route in the sitemap to its own index.html). Route list = /, /growth, /viral-creatives, /roas-calculator, /about, /case-studies, every /cases/ URL and the new /blog routes.	npm run build outputs one HTML file per route, and each file contains the page's visible text.
Tue 27 Oct	Per-page head tags in the HTML	Move the title, meta description, canonical and Open Graph values out of the client-side switch statement into the prerendered head of each route. Use the exact title tags and metas in section 6 and 7.	View-source on /growth shows its own title, description and canonical, not the home page values.
Tue 27 Oct	Crawlable links	Replace the header, mobile drawer and footer buttons (onClick, href="#home") with real anchor links to /, /growth, /case-studies and so on. Keep the click handler only for smooth scrolling.	A crawl with JavaScript turned off finds every page from the home page with no JavaScript.
Wed 28 Oct	Real 404 and static files	Every unknown URL (for example /nonexistent-xyz and /llms.txt) returns 200 with the home shell. In vercel.json, rewrite only known routes to their HTML and let everything else return a branded 404 page with status 404. Put llms.txt and the sitemap in /public so they serve as plain files.	curl -I /random-test returns 404; /llms.txt returns text/plain.
Wed 28 Oct	Blog section	Build /blog (index) and /blog/[slug] templates: H1, author box (Gaurav Kapoor), "Updated" date, table of contents, FAQ block, related posts, BlogPosting and BreadcrumbList schema. Posts as Markdown or MDX files in the repo so the team can publish without a developer.	A test post renders at /blog/test with the full template and validates in the Rich Results Test.
Thu 29 Oct	Case page clean-up	The sitemap has 132 entries, 129 unique: /cases/C83tKltSXUp, /cases/C8rGKA8Sk-R and /cases/C9y8opPyus2 are listed twice because the same Instagram post exists in the data as both a post and a reel. Remove the duplicate records. Export all 123 case URLs to a sheet with columns: shortcode, title, niche, revenue, ROAS, word count.	Sitemap has no duplicates; case sheet is complete.
Thu 29 Oct	Case slugs and thin pages	Give each case a descriptive slug built from niche and result, for example /cases/skincare-brand-146k-27-days-3-6x-roas, with a 301 from the old shortcode URL. Mark cases with under 150 words of unique text and no numbers as noindex, follow until they are expanded.	Slug map approved; noindex list approved.
Fri 30 Oct	Deploy the technical release	Deploy the prerender, head tags, links, 404 and case changes. Regenerate sitemap.xml with real lastmod dates (today every URL says 2026-10-20). Search Console > Sitemaps: submit https://brandscalinghacks.com/sitemap.xml.	Sitemap status "Success"; 5 URL Inspection live tests show the page text in the raw HTML.
Fri 30 Oct	BFCM post draft	WR finishes the BFCM draft from the brief in 7.3. SEO edits for on-page rules (section 5). DES makes the BFCM timeline graphic and the budget table image.	Draft and images approved by Gaurav.
Mon 2 Nov	Update the home page	Apply the home page outline in section 6: title, meta, new H1 with "performance marketing agency", proof strip, services, process, FAQ.	Home page live; view-source shows the new H1.
Tue 3 Nov	Publish the BFCM post	Publish /blog/bfcm-meta-ads-playbook using the brief in 7.3. Search Console > URL Inspection > Request indexing. Link to it from the home page "Latest playbook" strip and from /growth. Share in the Facebook group (Ecom Inner Circle), on Instagram @gauravecomm, LinkedIn and as a YouTube community post on @gauravecom.	Post live, indexing requested, 4 internal links and 4 shares done. Hard deadline Fri 6 Nov.

Day	Task	How to do it	Done when
Wed 4 Nov	Update /growth	Apply the /growth outline in section 6. Add the 4-phase process (Foundation, Test, Optimize, Scale) as real HTML text, not hover cards only.	/growth live with new title, H1 and FAQ.
Thu 5 Nov	Schema pass	Add Organization, WebSite, Person (Gaurav Kapoor), ProfessionalService, Service, FAQPage, BreadcrumbList and VideoObject (case videos) as described in sections 6, 8 and 9. Remove the meta keywords tag.	Rich Results Test and Schema Markup Validator show no errors on home, /growth, one case, the BFCM post.
Fri 6 Nov	Publish /shopify-agency	Build the new page from section 6. Add it to the header menu as "Shopify Agency" and to the footer.	Page live, in sitemap, indexing requested.
Mon 9 Nov	About page and legal pages	Rewrite /about from the outline in section 9 (entity facts, Gaurav's bio, address, profiles). Create /privacy-policy and /terms (today both footer links point to the case studies page).	/about live; legal pages live and linked in the footer.
Tue 10 Nov	Entity consistency and llms.txt	Use "Brand Scaling" as the brand name and "Brand Scaling Hacks LLC" as the legal name everywhere: site footer (today it shows two different copyright lines), schema, Instagram, LinkedIn, YouTube About, Facebook group. Publish llms.txt from section 9.	All profiles use the same name, one-line description and link to brandscalinghacks.com.
Wed 11 Nov	ROAS calculator page	Keep /roas-calculator. Add 300 to 500 words of text under the tool: formula, break-even ROAS, worked example, FAQ. Make the H1 "Free ROAS Calculator for Ecommerce" (today the visible heading reads "Validate your product's profit potential").	Page has text in raw HTML and links to the BFCM post and /growth.
Thu 12 Nov	Directory and profile listings	Create or claim profiles from section 10 (Clutch, DesignRush, GoodFirms, Sortlist, Google Business Profile only if the New York address is staffed, Shopify Partner Directory if Brand Scaling is a Shopify Partner [fill in]).	4 or more profiles live with identical name, description and URL.
Fri 13 Nov	Pillar prep and baseline tracking	Finish the Meta Ads Library pillar draft and embed the new @gauravecom video once it is public. Set up rank tracking for all keywords in 3.2. Run the 12 AI prompts in section 9 and fill the tracking table. Check the BFCM post in URL Inspection.	Pillar ready to publish Tue 17 Nov; rank and AI baselines saved.

From Mon 16 Nov the content engine runs: one post or pillar every Tuesday in the order of the calendar in 7.1, brief on Wednesday of the week before, draft by Friday, edit and Gaurav review on Monday, publish Tuesday, request indexing and share the same day. Every Monday the SEO lead checks Search Console for new queries at positions 8 to 20 and adds them as H2s or FAQs to the matching page (section 3.1). Every Friday: one case page gets a descriptive rewrite (300 words, numbers, what was done), so the case library turns from thin Instagram copies into citable proof.

3. Keyword research

3.1 Method

How this research was done:

1. Seed list from the services on the live site (Meta media buying, TikTok ads, Google Shopping and Performance Max, Shopify stores and CRO, direct-response creative and UGC, retention email and SMS), the metrics the agency talks about in its case studies (ROAS, CAC, AOV, conversion rate, net margin) and the topics competitors in DTC growth publish on (Meta Ads Library, Andromeda, BFCM, MER, LTV:CAC).
2. Volumes, yearly growth, last 3 months trend, difficulty, CPC and intent: Google search data, United States, pulled 22 Oct 2026.

3. Keep rule:
    - Trending = 100 or more searches a month and +10% or more a year. Use for posts, pillars and service pages.
    - Stable = 100 or more a month and -20% to +10% a year. Use only for service pages.
    - Drop everything else.
4. Exceptions approved in this plan, with the reason: "bfcm" and "black friday ads" are Stable but seasonal (bfcm is +185% over the last 3 months) and the agency has real BFCM results, so they get one dated post. "facebook ads for shopify", "ltv cac" and "marketing efficiency ratio" are Stable but have high buyer value (CPC $23.05, $24.32 and $39.95) and each post links straight to a service page or the calculator, so they work as service support pages.
5. Questions for H2s and FAQs: Google autocomplete for each primary keyword plus the prefixes "how", "what is", "best", "[keyword] vs", "[keyword] cost", "[keyword] for", "is", "why". Only buyer-useful questions are kept (no local India or Pakistan results, no retailer circular searches, no "roast" food results).

How the team repeats it every month (first Monday of the month):

1. Re-pull volumes and growth for every keyword in 3.2 plus 10 new seeds from that month's client work and Gaurav's YouTube topics.
2. Re-apply the keep rule. If a kept keyword falls below -20% a year, stop writing new content for it and only update the existing page.
3. Re-run the autocomplete script for each primary keyword and add new questions to 3.3.
4. Search Console mining: Performance > Search results > + New > Page > exact URL. Sort by Position. Every query at positions 8 to 20 with 20 or more impressions becomes either a new H2 (if it needs more than 2 sentences) or a new FAQ (if it can be answered in 1 to 2 sentences) on that page. Log the change date in the tracker and check the position again after 28 days.
5. Search Console > Performance > Search results > Queries: filter "Query contains" brand, scaling, gaurav to watch branded demand, which is the best AGO signal you can measure.

3.2 Full keyword table

Google search data, United States, pulled 22 Oct 2026. Growth (year) = change versus the same month last year. Last 3 months = change over the last 3 months.

Keyword	US searches / month	Growth (year)	Last 3 months	Difficulty	CPC	Intent	Type	Used on (page or post)
meta ads library	90,500	+124%	+13%	7	$13.65	Navigational	Trending	Pillar: Meta Ads Library: How to Find Winning Ecommerce Ads
meta ads	49,500	+70%	+7%	54	$17.21	Commercial	Trending	Pillar: Meta Ads for Ecommerce: The Complete 2026 Guide
black friday ads	49,500	-19%	+73%	53	$1.23	Commercial	Stable	BFCM post (secondary)

Keyword	US searches / month	Growth (year)	Last 3 months	Difficulty	CPC	Intent	Type	Used on (page or post)
what is roas	3,600	+17%	+32%	33	$6.42	Informational	Trending	Post: What Is ROAS? Good ROAS by Industry and How to Calculate It
performance marketing agency	2,900	+87%	+58%	0	$37.17	Commercial	Trending	Home page
bfcm	2,900	-3%	+185%	0	$51.38	Informational	Stable	BFCM post
shopify agency	1,600	+116%	+21%	58	$27.37	Navigational	Trending	/shopify-agency
dtc brands	1,600	+15%	-50%	24	$13.33	Navigational	Trending	Pillar: DTC Brands: 20 Brands Scaling With Meta Ads and What They Do
meta andromeda	1,300	+295%	-27%	13	$18.33	Informational	Trending	Post: Meta Andromeda Explained
ltv cac	1,300	-14%	+4%	34	$24.32	Navigational	Stable	Post: LTV:CAC for DTC Brands
shopify plus agency	590	-15%	+29%	16	$22.06	Navigational	Stable	/shopify-agency (secondary)
facebook ads for shopify	320	0%	-42%	14	$23.05	Commercial	Stable	Post: Facebook Ads for Shopify: The 2026 Setup
marketing efficiency ratio	260	-15%	-10%	17	$39.95	Informational	Stable	Post: MER vs ROAS
shopify store optimization	210	+42%	-17%	19	$10.42	Commercial	Trending	Post: Shopify Store Optimization: 15 Fixes
mer marketing	170	+7%	+16%	17	n/a	Informational	Stable	Post: MER vs ROAS (secondary)
ecommerce growth agency	110	+1%	+114%	0	$60.24	Commercial	Stable	/growth
product page optimization	110	+4%	-68%	18	n/a	Informational	Stable	Post: Shopify Store Optimization (secondary)

Notes on the table:

- "meta ads library" is navigational: most searchers want the tool itself. The pillar wins the "how to use", "how to search" and "how to find winning ads" part of that demand, which is still a large share of 90,500.

- "meta ads" (difficulty 54) is a long-term target. Rank the easier Meta posts first (Ads Library, Andromeda, Facebook ads for Shopify, BFCM) and link every one of them to the Meta Ads pillar with the anchor "Meta ads for ecommerce".
- "black friday ads" autocomplete is mostly shoppers looking for Walmart, Target and Best Buy circulars, so it stays secondary: the BFCM post targets the "best black friday ad campaigns" angle, not the circulars.
- "ecommerce growth agency" has only 110 searches but the highest CPC in the set ($60.24) and +114% over the last 3 months: small, but these are buyers.

3.3 Question keywords from Google autocomplete

All questions below are from Google autocomplete (US, 22 Oct 2026), shown without volumes.

performance marketing agency (Home page):

- what is a performance marketing agency: Home H2 "What a performance marketing agency does for an ecommerce brand"
- performance marketing agency for ecommerce: Home H1 support and title
- performance marketing agency for d2c: Home H2 on who we work with
- performance marketing agency cost: Home FAQ
- best performance marketing agency: Home FAQ ("How do I choose...")
- why performance marketing: Home FAQ
- how to measure marketing performance: Home FAQ, links to the MER vs ROAS post

ecommerce growth agency (/growth):

- what is an ecommerce agency: /growth FAQ
- ecommerce vs agency (in-house vs agency): /growth H2 "Agency vs in-house growth team"
- best ecommerce agency: /growth FAQ
- is ecommerce growing: BFCM post intro context only

shopify agency and shopify plus agency (/shopify-agency):

- what is a shopify agency: /shopify-agency H2 and FAQ
- how to choose a shopify agency: /shopify-agency H2 "How to choose a Shopify agency"
- best shopify agency in usa: /shopify-agency FAQ
- what is shopify plus agency: /shopify-agency H2
- how much is shopify plus per month: /shopify-agency FAQ
- best shopify plus agency: /shopify-agency FAQ
- shopify agency partners: /shopify-agency FAQ (partner status [fill in])

bfcm and black friday ads (BFCM post):

- what is bfcm in marketing: BFCM post H2 (definition box)
- bfcm dates 2026 / when is bfcm 2026: BFCM post H2 with the date table
- how long is bfcm: BFCM post FAQ
- what is bfcm on shopify: BFCM post FAQ
- best bfcm ads / best black friday ad campaigns: BFCM post H2 "What the best BFCM ads have in common"
- best bfcm campaigns: BFCM post H2
- what is bfcm on tiktok: BFCM post FAQ

meta ads library (pillar):

- what is meta ads library: H2 definition
- how to use meta ads library: H2 step by step

- how to search meta ads library: H3
- how to download meta ads library video: H2
- is meta ads library free: FAQ
- meta ads library login: FAQ
- meta ads library api / is meta ads library api free: H2 and FAQ
- why is meta ads library not working: FAQ
- meta ad library search by id: H3
- meta ad library sort by impressions: FAQ
- meta ads library instagram: H3
- meta ads library tool: H2 on third-party tools

meta andromeda (post):

- what is meta andromeda: H2 definition
- how meta andromeda works: H2
- meta andromeda creative diversity: H2
- meta andromeda campaign structure: H2
- meta andromeda vs gem: H2
- meta andromeda best practices: H2 checklist
- is meta andromeda live: FAQ
- meta andromeda update 2026: FAQ

what is roas (post):

- what is roas in marketing: H2 definition
- what is roas formula / roas how to calculate: H2
- what should roas be / what is a good roas: H2
- what is good roas for ecommerce: H2 with table
- what is good roas in meta ads: H3
- roas vs roi: H2
- roas vs mer / roas vs cac: H2 and link to MER post
- roas calculator break even: H2, links to /roas-calculator
- how to calculate roas in meta ads: H3

facebook ads for shopify (post):

- how to run facebook ads for shopify store: H2
- how to set up facebook ads for shopify: H2
- how to connect facebook ads to shopify: H2
- facebook ads pixel shopify: H3
- how much are facebook ads for shopify: H2 budget
- facebook ads library shopify: H3, links to the Ads Library pillar

meta ads (pillar):

- what is meta ads / how meta ads work: H2
- how meta ads algorithm works: H2
- how meta ads auction works: H3
- meta ads cost / meta ads cost per day / meta ads cost per month: H2
- meta ads vs google ads: H2

- meta ads vs tiktok ads: H3
- meta ads vs boost post: FAQ
- is meta ads worth it: FAQ
- why meta ads not spending: FAQ
- how to turn off advantage+: FAQ
- best meta ads agency: H2 near the CTA
- meta ads for ecommerce / meta ads strategy for ecommerce: H1 and H2

ltv cac (post):

- what is ltv cac ratio: H2 definition
- ltv cac formula / how to calculate ltv cac: H2
- what ltv cac is good / good ltv to cac ratio: H2
- why is 3x ltv cac good: H3
- ltv/cac and payback period: H2
- how to improve ltv/cac ratio: H2
- roas and ltv cac: H3
- what's a good ltv to cac for consumer: FAQ

marketing efficiency ratio and mer marketing (post):

- what is marketing efficiency ratio: H2
- marketing efficiency ratio formula / how to calculate: H2
- marketing efficiency ratio vs roas / mer vs blended roas: H2
- what is a good marketing efficiency ratio: H2
- marketing efficiency ratio benchmark: H3

shopify store optimization and product page optimization (post):

- shopify store speed optimization: H2 fix group
- shopify store seo optimization: H3
- product page optimization shopify: H2 fix group
- best product page design shopify: H3 examples
- shopify cro / what is shopify cro / shopify cro audit: H2 and FAQ

dtc brands (pillar):

- what is dtc brands / what does dtc brand mean: H2 definition
- dtc brands examples / dtc brands list: H2 list of 20
- best dtc brands 2026 / top dtc brands in usa: H2
- what is dtc brand on tiktok: H3
- dtc brands uk / dtc brands in canada: H3 for later market expansion

3.4 Keywords dropped and why

These were checked as candidates and left out of the plan. No volumes are shown for terms outside the pulled data set.

- "roas" on its own: autocomplete is dominated by roasting food (roasted potatoes, roast beef). Intent is mixed, so the plan targets "what is roas" instead.
- "good roas": same food mix in autocomplete; covered as an H2 in the ROAS post.
- "black friday ads" as a primary: retailer circular intent (Walmart, Target, Best Buy ads). Kept only as secondary.

- "ecommerce agency": autocomplete is local (India, Delhi, Karachi) and job searches. Wrong buyer for a US-first plan.
- "best performance marketing agency" and "performance marketing agency usa": city and country modifiers are mostly Indian cities. Only the US and ecommerce versions are used, inside the home page.
- "shopify agency jobs", "how to start a shopify agency", "how to become a shopify plus agency": job seekers and agency founders, not buyers.
- "meta ads library downloader", "meta ads library video downloader": tool seekers; mentioned once in the pillar, no page of its own.
- "facebook ads for shopify" new content beyond the one post: the keyword is flat for the year and -42% over 3 months, so it gets one post and no more.
- "product page optimization" as a primary: -68% over the last 3 months and the top autocomplete is Apple App Store "product page optimization", a different topic. Kept only as secondary.
- "dtc brands" follow-up posts: -50% over the last 3 months; one pillar only until the trend recovers.

4. Technical SEO

Findings come from the data file and from fetching the live site on 22 Oct 2026 (home page HTML, robots.txt, sitemap.xml, the JavaScript bundle and test URLs).

Issue or check	Why it matters	How to fix
All pages are client-side rendered: raw HTML is an empty root div	Google indexes raw HTML first and renders JavaScript later and not always. AI crawlers (ChatGPT, Perplexity, Claude) mostly do not run JavaScript, so today they see no text at all. The H1 did not show when the home page was read.	Prerender every at build time so t HTML contains t H1, links and sch Test with view-so and URL Inspect
Every URL serves the same title and a canonical to the home page	In raw HTML, /growth, /about and all /cases/ pages say canonical = https://brandscalinghacks.com/. Google can fold all of them into the home page.	Prerender a uniq meta description self-referencing canonical per rou (values in section and 7).
Apex redirects to www, but every tag uses the apex	brandscalinghacks.com 308s to www.brandscalinghacks.com, while canonical, sitemap, robots and Open Graph point to the apex. Mixed signals split authority.	Vercel > Settings Domains: make t apex primary and redirect www to i existing tags bec correct.
Unknown URLs return 200 (soft 404)	/nonexistent-xyz and /llms.txt return the home shell with status 200. Google wastes crawl budget and may index junk URLs.	vercel.json: route known paths; everything else r a 404 page with 404.
Navigation is buttons and hash links, not crawlable links	Header, mobile menu and footer use onClick and href="#home". Crawlers cannot follow them, so internal links pass no value.	Use real anchor with href="/growt so on. Keep anim in the click handl

Issue or check	Why it matters	How to fix
3 duplicate URLs in the sitemap	/cases/C83tKltSXUp, /cases/C8rGKA8Sk-R and /cases/C9y8opPyus2 are listed twice (same Instagram post stored as post and reel).	Remove the dup records from the data; regenerate sitemap.
Case slugs are random Instagram shortcodes	/cases/Cft79TLpxyk says nothing to users or Google. 123 case pages are mostly Instagram captions, which also exist on Instagram (duplicate text).	Descriptive slugs 301s (/cases/supplement-brand-137k-month-3-89x-roa 150 to 300 word summary per cas (niche, starting p what was done, timeframe), and noindex, follow o cases with no nu until rewritten.
"150+ case studies" claim vs 123 case URLs	Trust and consistency: the site, meta descriptions and buttons say 150+, the sitemap has 123 unique case pages.	Either publish the remaining cases change the copy real count. AI an repeat numbers, they must match
Sitemap lastmod is the same date for every URL	All 132 entries say 2026-10-20, so Google ignores lastmod.	Generate lastmo the real content c date at build time
Privacy Policy and Terms links go to /case-studies	Missing legal pages hurt trust for buyers and for Google's quality review of a service business.	Create /privacy-p and /terms and li them in the foote
Two different footer copyright lines	One says "Brand Scaling Hacks LLC", another "Brand Scaling Hacks". Entity data must be identical everywhere.	Use "Brand Scal Hacks LLC" as le name in the foote schema; "Brand Scaling" as bran name.
/viral-creatives mixes DTC with roofing, HVAC, solar, personal injury law and chiropractic ads	The DTC positioning gets diluted; Google and AI tools may classify the site as a general lead-gen agency.	Lead with DTC n (skincare, supple apparel, jewelry) local-service ads one clearly label and title the page DTC creative.
Meta keywords tag	Ignored by Google; lists "Gaurav Kapoor" and other terms in a way that looks like stuffing.	Remove it.
7 Google Font families loaded on every page	Slows Largest Contentful Paint on mobile.	Keep 2 families, host them, use fo display swap and preload the main weight.

Issue or check	Why it matters	How to fix
875 KB main JavaScript bundle plus a hero video	Hurts mobile Core Web Vitals (LCP, INP).	Code-split per ro lazy-load case vi and the calculato the hero video a compressed pos image and no au on mobile data.
Case videos self-hosted as MP4	Good for video rich results, but only if marked up.	Add VideoObject schema with nam description, thumbnailUrl (the poster), uploadD contentUrl.
One canonical domain with 301s	Only one version of each URL may resolve: https, apex, no trailing slash.	After the domain test http, www, tr slash and upperc variants: all must 308 to the canon
Sitemap in Search Console	Speeds up discovery of new posts.	Submit https:// brandscalinghac sitemap.xml and blog URLs automatically on publish.
robots.txt	Today it allows all and points to the apex sitemap, which is correct.	Keep. Do not blo assets/ (Google the JS and CSS render).
noindex thin pages	Thin case pages and any future tag or filter pages dilute quality.	noindex, follow o cases until rewrit never index sear filter URLs on /ca studies or /viral- creatives.
Titles and metas unique	Duplicates confuse ranking.	One title and one per URL from se 6 and 7; case titl the case sheet.
One H1 per page	The home page code has a hero H1 ("We Build What Businesses Need To Grow.") and the calculator section also renders an H1.	One H1 per route other headings H below.
Core Web Vitals on mobile	Ranking and conversion factor; most DTC founders browse on phones.	PageSpeed Insig home, /growth, o case, one post. T LCP under 2.5 s, under 200 ms, C under 0.1. Check Search Console Experience > Co Vitals monthly.
Image compression	Case thumbnails, client logos and dashboards are heavy.	WebP or AVIF, w and height attribu lazy-load below t max 150 KB per image.

Issue or check	Why it matters	How to fix
Broken links	Instagram post links and old case IDs can break.	Monthly crawl; fi remove 404 link 301s for every c case slug.
HTTPS	Already on HTTPS with HSTS (Vercel).	Keep; make sure mixed-content im
404 page	Today there is none (soft 404).	Branded 404 wit to /growth, /case studies, /blog an audit CTA.
Breadcrumbs	Helps Google understand structure and shows in results.	Visible breadcru posts and cases > Blog > Post) w BreadcrumbList schema.
URL slugs lowercase with hyphens	Readable, consistent URLs.	All new slugs lowercase, hyph no dates in post (so "2026" posts updated next yea

Indexing check (how to):

1. Search Console > URL Inspection: paste the full URL (for example https://brandscalinghacks.com/growth).
2. Read "URL is on Google" or "URL is not on Google" and the reason.
3. Click "Test live URL", then "View tested page". In the HTML tab, search for the H1 text. If it is not there, prerendering is not working for that route.
4. Check "User-declared canonical" and "Google-selected canonical". Both must be the URL itself. If Google picked the home page, the canonical fix has not shipped for that route.
5. If everything is correct and the page is new or changed, click "Request indexing" (limit around 10 a day, so prioritize new posts and service pages).
6. Repeat for every new post on publish day and for the 5 main pages every Monday in the first month.

5. On-page rules (house style)

These rules apply to every page and post on brandscalinghacks.com. The on-page check in 7.4 tests each one before publishing.

1. Title tag: primary keyword first, brand last, separated by a pipe, max 60 characters. Example: "What Is ROAS? Formula, Good ROAS and Calculator | Brand Scaling" is too long (63); use "What Is ROAS? Formula and Good ROAS | Brand Scaling" (51). Write "Brand Scaling", never "BRAND SCALING" in capitals or "Brand Scaling Hacks" in titles.
2. Meta description: max 155 characters, contains the primary keyword once, one proof point from the site (for example "$50M+ in Meta ad spend managed") and a call to action ("Book a growth audit", "Use the free calculator", "Read the playbook").
3. URL slug: lowercase, hyphens, 2 to 5 words, primary keyword only, no year and no stop words. Posts live under /blog/. Examples: /blog/meta-ads-library, /blog/what-is-roas, /shopify-agency.
4. H1: exactly one per page, contains the primary keyword, matches the search intent (a guide H1 for "how" searches, an agency H1 for "agency" searches). It can be longer than the title tag.
5. H2: one per main sub-question the searcher has. Use the secondary and autocomplete question keywords from 3.3 naturally, often as the question itself ("What is a good ROAS for ecommerce?"). Put a 40 to 60 word direct answer as the first paragraph under every question H2.

6. H3: steps, examples, sub-points and comparisons under an H2. Use H3s for numbered steps so they can be pulled into list snippets.
7. First 100 words: contain the primary keyword once, in a sentence that also answers the query.
8. Keyword use: write for the reader. As a guide, the exact primary keyword appears in the title, H1, first 100 words, one H2, the meta description and the image alt of the main image, and then only where it reads naturally. Use variations (Meta ads, Facebook ads, Meta ad campaigns) instead of repeating the exact phrase. No keyword lists, no hidden text, no repeated phrases in footers.
9. Image file names and alt text: descriptive, hyphenated file names (meta-ads-library-filters-active-ads.webp, not IMG_2231.png). Alt text describes what the image shows in one sentence and includes a keyword only when true ("Meta Ads Library search filtered to active video ads in the United States"). Dashboards from case studies: alt text states the number shown ("Shopify dashboard showing $146,184 in sales over 27 days").
10. Internal links: every post links to its pillar and to one service page (/growth, /shopify-agency or the home page) and, where relevant, to /roas-calculator and one case study. Every pillar links to all of its cluster posts. Anchor text describes the target page ("our ecommerce growth agency service", "how Meta Andromeda changed ad delivery"), never "click here" or "read more".
11. External links: 2 to 4 per post to primary sources: Meta's own help center, Meta Engineering blog, Meta Ad Library, Shopify Help Center and Shopify's BFCM data pages, Google Search Central. Open in the same tab, no nofollow needed for these.
12. Word counts by page type: home page 1,200 to 1,600 words; service pages 1,500 to 2,200; pillars 3,000 to 4,000; standard posts 1,800 to 2,500; case pages 300 to 600; calculator page 500 to 800 words of text around the tool.
13. Updated date: every post shows "Updated [date]" under the H1 and in the schema (dateModified). Update the 2026 posts in Q1 2027 and change the date only when the content really changed.
14. Author box: every post shows Gaurav Kapoor with photo, title "Founder, Brand Scaling", one line of credentials from the site ("12+ years in ecommerce, $50M+ in Meta ad spend managed, 150+ published case studies"), and links to /about, YouTube @gauravecom, Instagram @gauravecomm and LinkedIn. If a team member writes the post, show them as author and Gaurav as reviewer ("Reviewed by Gaurav Kapoor").
15. Proof rule: every post includes at least one real number from a Brand Scaling case page and links to that case. This is what makes the content citable and different from generic agency blogs.
16. CTA rule: one soft CTA after the first third of the post (for example "Want us to audit your Meta account? Book a Brand Growth Audit") and one strong CTA box at the end. Service pages repeat the main CTA after the proof section and at the end.

Annotated example skeleton (the "What Is ROAS?" post):

```
H1: What Is ROAS? Good ROAS by Industry and How to Calculate It
  [Updated date] [Author box: Gaurav Kapoor, Founder, Brand Scaling]
  Intro (direct answer, 40 to 60 words): defines ROAS, gives the formula
    and a one-line example, mentions the free calculator. Contains "what is
    roas" phrasing in the first sentence.
  [Definition box: ROAS = revenue from ads / ad spend]
  H2: What is ROAS in marketing?          // autocomplete question as H2
    Direct answer paragraph, then a 3-row table: ROAS, ROI, MER.
  H2: How to calculate ROAS (formula and example)
    H3: The ROAS formula                  // list snippet target
    H3: Worked example from a real Shopify store
         (case: $146,184 revenue on $40,123 spend = 3.64x)
    H3: How to calculate ROAS in Meta Ads Manager
  H2: What is a good ROAS for ecommerce?
    H3: Break-even ROAS: the number that matters first
    H3: ROAS ranges from Brand Scaling client accounts (table)
    H3: What is a good ROAS in Meta ads?
  H2: ROAS vs ROI vs MER                  // comparison table snippet
  H2: How to improve ROAS                 // numbered list, 7 items
  [Soft CTA: try the ROAS calculator]
  H2: FAQ (5 questions, FAQPage schema)
  [CTA box: Book a Brand Growth Audit]
  [Internal links: Meta Ads pillar, MER vs ROAS post, /roas-calculator, /growth]
```

6. Service pages

Shared rules for all service pages: prerendered HTML, one H1, the proof strip uses only numbers that appear on the site, the main CTA is "Book Your Brand Growth Audit" (the 1-on-1 diagnostic described in the site FAQ), and the secondary CTA is "See 150+ case studies" (or the real count, see section 4).

Home page (update)

- URL: https://brandscalinghacks.com/
- Page map title: "Performance Marketing Agency for Ecommerce Brands | Brand Scaling" (65 characters, over the limit). Title tag as shipped: Performance Marketing Agency for Ecommerce | Brand Scaling (58 characters; same keyword first, brand last).
- Meta description: Performance marketing agency for DTC ecommerce brands: Meta and TikTok ads, Shopify CRO and creative. $50M+ ad spend managed. Book a growth audit. (146 characters)
- Primary keyword: performance marketing agency (2,900 a month, +87% a year, difficulty 0)
- Secondary keywords: none in the page map; use the autocomplete variants "performance marketing agency for ecommerce", "performance marketing agency for d2c", "what is a performance marketing agency".
- Search intent: commercial. A founder or marketing lead comparing agencies to hire.
- Target length: 1,200 to 1,600 words of real HTML text.
- H1: The Performance Marketing Agency for DTC Ecommerce Brands Ready to Scale

Outline:

- Hero (above the fold)
  - Sub-headline: "We build the creative, run the ads, fix the tracking, and give you a growth system you can trust." (existing site copy, keep it).
  - Proof line: "12+ years in ecommerce. $50M+ in Meta ad spend managed. 30+ niches. 150+ verified case studies."
  - Primary CTA button: Book Your Brand Growth Audit. Secondary: See case studies.
  - Client logo strip with alt text per logo: Dr. Naomi Skin, Juice Beauty, Vedge Nutrition, ionBottles, Steel Horse Leather, Little and Lively, Swamp Kitten Jewelry, Veil Cosmetics, Pure Skin Lab, Ghost Democracy and others from /logos/clients.
- H2: What a performance marketing agency does for an ecommerce brand
  - 40 to 60 word direct answer: paid for outcomes (revenue, CAC, ROAS), not impressions; Brand Scaling runs Meta, TikTok and Google, the creative and the Shopify store as one system.
  - H3: Not just ads, not just a store: the existing "Your entire ecommerce growth engine" idea, in text.
- H2: Results from real ad accounts
  - H3: $2.3M in sales at 11.6x ROAS on $200K ad spend (link to case).
  - H3: $146,184 in 27 days on $40.1K spend for a skincare brand, 3.64x ROAS (link).
  - H3: €118,000 in the first month for a UK skincare brand (link).
  - H3: $1.6M on $140K ad spend at 11.98x ROAS (link).
  - Note: use the case title and the revenue and ROAS exactly as on the case page; one sentence on what was done (for example "consolidated ad sets into broad Advantage+ campaigns and rebuilt the checkout bundles").
  - CTA after this section: Book Your Brand Growth Audit.
- H2: Services: one growth engine, six levers
  - H3: Meta ads (Facebook and Instagram): broad-targeting structures, Advantage+, budget scaling; link to /growth.
  - H3: TikTok ads: Spark Ads and creator content; link to /growth.
  - H3: Google Shopping, Performance Max and YouTube: capture high-intent shoppers; link to /growth.

    - H3: Direct-response creative and UGC: 30 to 50+ angle iterations a month, 45+ hook and angle matrix; link to /viral-creatives.
    - H3: Shopify stores and CRO: sub-1 second mobile pages, offer and bundle architecture, checkout friction removal; link to /shopify-agency.
    - H3: Retention email and SMS: LTV flows that lift profit from existing traffic.
- H2: Who we work with
    - DTC and ecommerce brands doing $20K to $2M+ a month with product-market fit; at least $10,000 to $20,000+ a month in ad spend (site FAQ).
    - Niches with case proof: skincare and beauty, supplements and nutrition, fitness, apparel, jewelry, home goods.
    - H3: Performance marketing agency for D2C vs general digital agency: short comparison table (paid on results focus, creative volume, store and CRO included, reporting on MER and contribution margin).
- H2: How we scale a brand: Foundation, Test, Optimize, Scale
    - H3: Foundation: offer setup, sub-1s mobile Shopify, unit margin economics.
    - H3: Test: weekly UGC ad cadence, 45+ hook and angle matrix, Advantage+ audience testing.
    - H3: Optimize: conversion rate, ROAS and margin health, checkout friction removal.
    - H3: Scale: high-volume creative lab, global market expansion.
    - Timeline sentence from the site FAQ: diagnostic and restructure in the first 7 to 14 days, measurable change in CPA, AOV and ROAS in 2 to 4 weeks.
- H2: From your first sale to 9 figures: which stage are you at?
    - The 4 milestone cards as text: proof of concept, $500+/day predictable testing, $100K/month multi-channel, $1M/month category leadership (40+ creative assets a month).
- H2: Meet the founder: Gaurav Kapoor
    - 80 words: 12+ years building and scaling online businesses, $50M+ ad spend managed, YouTube @gauravecom, link to /about.
- H2: Latest playbooks
    - Cards linking to the BFCM post, then each new pillar as it publishes (Meta Ads Library, Meta Ads for Ecommerce, DTC Brands).
- H2: Frequently asked questions (FAQ block below)
- Final CTA band: "Only 3 strategy sessions available this week" (keep only if true each week) plus Book Your Brand Growth Audit.

FAQ block:

1. What is a performance marketing agency? A performance marketing agency plans and runs paid campaigns that are measured on business outcomes such as revenue, cost per acquisition and ROAS. Brand Scaling does this for DTC ecommerce brands across Meta, TikTok and Google, together with the creative and the Shopify store.
2. How much does a performance marketing agency cost? Most agencies charge a monthly retainer, a percentage of ad spend, a performance fee or a mix. Brand Scaling quotes after the Brand Growth Audit, and partners typically spend at least $10,000 to $20,000 a month on ads. [Fill in: fee model if Gaurav wants it public.]
3. What types and sizes of ecommerce brands do you work with? DTC and ecommerce brands doing roughly $20K to $2M+ a month with proven product-market fit, in apparel, skincare and beauty, wellness, supplements, home goods, electronics and luxury goods.
4. How quickly will we see results? The first 7 to 14 days cover the diagnostic audit, account restructure, product page and offer rebuild and tracking setup. Most brands see measurable improvement in CPA, AOV and ROAS within 2 to 4 weeks of the first creative wave.

5. How do you measure marketing performance? We report on blended numbers first (MER, new customer CAC, contribution margin) and on platform ROAS second, because platform ROAS alone over-credits ads. Our post on MER vs ROAS explains the difference.

- Schema to add: Organization (sitewide, see section 9), WebSite, ProfessionalService with areaServed US, GB, CA, AU, FAQPage for the block above, VideoObject for the hero video.
- Internal links out: /growth, /shopify-agency, /viral-creatives, /roas-calculator, /case-studies, 4 case pages, /about, BFCM post and pillars. Internal links in: every blog post links to the home page once with "performance marketing agency for ecommerce" or a close variant; /about and /case-studies link back.
- Primary CTA: Book Your Brand Growth Audit.

/growth (update)

- URL: https://brandscalinghacks.com/growth
- Page map title: "Ecommerce Growth Agency: Meta, TikTok and CRO | Brand Scaling" (61 characters, one over). Title tag as shipped: Ecommerce Growth Agency: Meta, TikTok, CRO | Brand Scaling (58 characters).
- Meta description: Ecommerce growth agency for DTC brands: Meta and TikTok media buying, creative, Shopify CRO and retention in one system. Book a Brand Growth Audit. (147 characters)
- Primary keyword: ecommerce growth agency (110 a month, +1% a year, +114% last 3 months, CPC $60.24)
- Secondary keywords: none in the page map; use "full service ecommerce agency", "ecommerce growth engine", "DTC growth agency" naturally.
- Search intent: commercial. Buyer wants one partner for acquisition and conversion.
- Target length: 1,800 to 2,200 words.
- H1: Ecommerce Growth Agency: Meta, TikTok, Google and Shopify CRO in One Engine

Outline:

- Intro: 50 words. Brand Scaling is an ecommerce growth agency that runs paid acquisition, creative, the store and retention together, so the fixes in one area do not get lost in another. CTA button.
- H2: What an ecommerce growth agency does (and what it does not)
  - Direct answer, then a 2-column table: growth agency vs ads-only media buyer vs web design shop.
- H2: The four phases of our growth engine
  - H3: Foundation: offer, sub-1s mobile Shopify, unit margin economics. Deliverables list.
  - H3: Test: weekly UGC ad cadence, 45+ hook and angle matrix, Advantage+ audience tests, direct message testing.
  - H3: Optimize: CVR, AOV, ROAS and margin health, checkout friction removal.
  - H3: Scale: high-volume creative lab (40+ assets a month at the $1M/month stage), global market expansion.
  - Visual: a horizontal 4-step diagram in HTML (not hover-only cards).
- H2: Paid media: Meta, TikTok and Google
  - H3: Meta ads: broad structures, Advantage+ consolidation, cost caps and bid caps for profitable scale (the site's BFCM case used cost-controlled campaigns plus ASC). Link to the Meta Ads pillar once live.
  - H3: TikTok ads: Spark Ads, creator content; proof: skincare brand $20,000 in 12 days on TikTok ads at 35% net margin.
  - H3: Google Shopping, Performance Max and YouTube: capture search demand the Meta ads create.
- H2: Creative that feeds the algorithm
  - 30 to 50+ angle iterations a month, scripting, creator sourcing, UGC and motion assets. Link to /viral-creatives and the Meta Andromeda post (once live): why creative diversity now drives delivery.

- H2: Shopify CRO and offer engineering
  - Proof: 5.25% conversion rate in June 2022 on a store doing $61,000 that month. Bundles, quantity breaks, post-purchase upsells. Link to /shopify-agency.
- H2: Retention: email and SMS that raise LTV
  - Flows list (welcome, browse and cart abandonment, post-purchase, win-back), link to the LTV:CAC post once live.
- H2: Tracking and reporting you can trust
  - Platform ROAS vs blended MER, server-side tracking and the Conversions API, weekly reporting. Link to /roas-calculator and the MER vs ROAS post once live.
- H2: Results by stage
  - Table: Stage, Brand type, Result, Link. Rows from case pages: new brand $24,930 in 15 days (422 orders); supplement brand $137,620 month at 3.89x; DTC brand $1M (983K+) in 6 months; brand $2.3M at 11.6x ROAS.
  - CTA after the table.
- H2: Agency vs in-house growth team
  - Cost, speed, creative volume, risk. Honest: in-house wins once a brand passes a certain spend and has a strong head of growth; agency wins on speed and pattern knowledge across 30+ niches.
- H2: Who this is for
  - $20K to $2M+ a month, $10,000 to $20,000+ monthly ad spend, product-market fit. Not for brand-new stores with no sales (point them to the free Facebook group).
- H2: FAQ
- Final CTA band.

FAQ block:

1. What is an ecommerce growth agency? An ecommerce growth agency runs the levers that grow online revenue as one system: paid ads, creative, the store's conversion rate, offers and retention. Brand Scaling does this for DTC brands across Meta, TikTok, Google and Shopify.
2. What is the difference between an ecommerce agency and an ecommerce growth agency? Many ecommerce agencies build stores. A growth agency is measured on revenue and profit after launch, so it owns ads, creative, CRO and retention and reports on CAC, MER and contribution margin.
3. What is the minimum ad spend to work with Brand Scaling? Partners typically spend at least $10,000 to $20,000 a month on paid ads, with the cash flow to scale to $100K to $500K+ a month as profit milestones are hit.
4. Do you produce the ad creative? Yes. The team writes the scripts, sources and manages creators, produces UGC and motion assets and ships 30 to 50+ angle iterations each month so accounts do not hit creative fatigue.
5. How does the Brand Growth Audit work? It is a 1-on-1 diagnostic in which Gaurav and the senior team review your Meta ad accounts, creative performance, conversion bottlenecks and unit economics, then give you a step-by-step roadmap to scale.

- Schema to add: Service (serviceType "Ecommerce growth marketing", provider = Organization @id, areaServed US, GB, CA, AU), FAQPage, BreadcrumbList.
- Internal links out: home, /shopify-agency, /viral-creatives, /roas-calculator, /case-studies, 4 case pages, Meta Ads pillar, MER vs ROAS post, LTV:CAC post. Internal links in: home services section, every Meta and metrics post (with anchors like "ecommerce growth agency" and "full-service growth"), the BFCM post.
- Primary CTA: Book Your Brand Growth Audit.

/shopify-agency (new)

- URL: https://brandscalinghacks.com/shopify-agency
- Title tag: Shopify Agency for Scaling DTC Brands | Brand Scaling (53 characters, same as the page map)
- Meta description: Shopify agency for DTC brands that need more than a theme: sub-1s mobile stores, CRO, bundles and upsells tied to Meta ads. Book a store audit. (143 characters)
- Primary keyword: shopify agency (1,600 a month, +116% a year, difficulty 58)
- Secondary keywords: shopify plus agency (590 a month, -15% a year, difficulty 16)
- Search intent: navigational and commercial. People looking for a Shopify agency to hire or a list of agencies. The page must make clear in the first screen that this is a growth-focused Shopify agency, not a theme shop.
- Target length: 1,800 to 2,200 words.
- H1: Shopify Agency for DTC Brands That Want More Revenue Per Visitor

Outline:

- Intro: 50 words. A Shopify agency that builds and optimizes stores for paid traffic: every page is built for the ads that send visitors to it. Proof line: 5.25% store conversion rate case. CTA.
- H2: What a Shopify agency does
  - Direct answer. Then 3 types: design and build agencies, Shopify Plus development agencies, growth-focused Shopify agencies (where Brand Scaling sits).
- H2: Our Shopify services
  - H3: Fast mobile store builds and rebuilds: sub-1 second mobile load target, custom landing pages per ad angle.
  - H3: Product page optimization: above-the-fold offer, reviews, guarantees, bundles; link to the Shopify Store Optimization post once live.
  - H3: Offer and AOV engineering: quantity breaks, in-cart bundles, post-purchase upsells (the site's case "Hot Q4 niches: scaling single day revenue to $7,597 with quantity breaks").
  - H3: Checkout friction removal and tracking: pixel and Conversions API, GA4 ecommerce events.
  - H3: CRO testing program: hypothesis backlog, A/B tests, monthly readout.
- H2: Shopify Plus agency services
  - When a brand should move to Shopify Plus (checkout extensibility, automation, B2B and expansion stores); what Brand Scaling does on Plus. Pricing line as a task: add current Shopify Plus starting price from the official Shopify Plus page and the date checked.
  - Partner status: [fill in: Shopify Partner or Shopify Plus Partner, if any. Do not claim it if not true.]
- H2: Store results
  - Case cards: $61,000 month at 5.25% conversion rate; $24,098 in a single day (292 orders) on a new brand; DTC fitness brand $80K in 24 hours with 862 orders shipped. Link each case.
- H2: How we work: audit, rebuild, test, scale
  - H3 per step with timeline (first 7 to 14 days: audit and rebuild).
- H2: How to choose a Shopify agency
  - Checklist of 7 questions: Do they show conversion rate results? Do they run ads too? Who writes copy? How do they test? Do you own the theme and code? What is the reporting? What happens after launch?
- H2: Shopify agency vs freelancer vs in-house developer
  - Comparison table: cost, speed, CRO skill, ad alignment, risk.
- H2: FAQ
- Final CTA: Book a Shopify store audit (the Brand Growth Audit with the store focus).

FAQ block:

1. What is a Shopify agency? A Shopify agency designs, builds and improves online stores on Shopify. Some focus on design and development; Brand Scaling focuses on conversion and growth, so the store is built around the ads and offers that bring buyers in.
2. What is a Shopify Plus agency? A Shopify Plus agency works with brands on Shopify Plus, Shopify's plan for high-volume merchants, on things like checkout customization, automation and multi-store setups. Brand Scaling works on Plus stores as part of its CRO and growth work.
3. How much is Shopify Plus per month? Shopify sets Plus pricing and changes it from time to time, so check the official Shopify Plus pricing page. [Task: add the current starting price and the date checked.]
4. How do I choose the best Shopify agency in the USA? Ask for conversion rate and revenue results from live stores, check that they understand paid traffic, confirm you own the code, and ask how they test changes after launch.
5. How long does a Shopify store rebuild take? The audit and first rebuild of key pages (home, product, cart) happen in the first 7 to 14 days of an engagement; testing then runs every month.

- Schema to add: Service (serviceType "Shopify development and conversion rate optimization"), FAQPage, BreadcrumbList.
- Internal links out: home, /growth, /roas-calculator, /case-studies, 3 case pages, Shopify Store Optimization post, Facebook Ads for Shopify post. Internal links in: home services section, /growth CRO section, Shopify Store Optimization post, Facebook Ads for Shopify post, BFCM post.
- Primary CTA: Book a Shopify store audit.

/roas-calculator (keep)

- Primary keyword: none in the page map ("-"). Action: keep the page and its URL, do not merge. It is a link asset and the conversion step for the "what is roas", MER and LTV:CAC posts.
- Title tag: Free ROAS Calculator for Ecommerce | Brand Scaling (50 characters; page map title plus brand)
- Meta description: Free ROAS calculator for ecommerce: enter price, product cost and CAC to get your break-even ROAS and profit per order before you scale ad spend. (145 characters)
- H1: Free ROAS Calculator for Ecommerce
- What to add under the tool (500 to 800 words, prerendered): how to use the calculator in 4 steps; the ROAS formula and the break-even ROAS formula (1 divided by gross margin); one worked example; a short "what a good ROAS looks like" paragraph linking to the What Is ROAS post; 4 FAQs; a CTA "Want a second pair of eyes on your numbers? Book a Brand Growth Audit".
- Schema: WebApplication (applicationCategory "BusinessApplication", offers price 0), FAQPage, BreadcrumbList.
- Links in: What Is ROAS post, MER vs ROAS post, LTV:CAC post, BFCM post, /growth, home. Links out: What Is ROAS post, /growth.

Existing pages not in the keyword map

- /case-studies: keep as the hub. Title tag: Ecommerce Case Studies: Meta Ads Results | Brand Scaling (56). Add filters by niche as real links, a 150-word intro and a "most-cited results" table (top 10 cases by revenue).
- /cases/[slug]: rewrite in batches (5 a week from Mon 16 Nov), descriptive slugs, VideoObject schema, one "What we did" section with 3 to 5 bullets.
- /viral-creatives: keep; title for DTC creative (see section 4) and link to /growth.
- /about: rewrite as the entity page (outline in section 9).

7. Blog and content plan

7.1 Calendar

M2 = Mon 16 Nov to Fri 11 Dec 2026, M3 = Mon 14 Dec 2026 to Fri 8 Jan 2027, M4 = Mon 11 Jan to Fri 5 Feb 2027. W1 to W4 = week of that month. Every item publishes on the Tuesday of its week. The BFCM post is the one exception: it publishes Tue 3 Nov 2026 (window Mon 2 to Fri 6 Nov), 24 days before Black Friday on Fri 27 Nov 2026.

When	Title	Type	Primary keyword (volume, growth)	Secondary	Word count
Nov W1, Tue 3 Nov 2026	BFCM 2026: The Meta Ads Playbook for Shopify Brands	Post	bfcm (2,900, -3%; +185% last 3 months)	black friday ads (49,500, -19%)	2,500

Holiday weeks: Tue 22 Dec and Tue 29 Dec are scheduled publishes. Finish both drafts by Fri 18 Dec and schedule them in the repo so nobody has to work on those days.

7.2 Topic clusters and internal link map

Three pillars. Every cluster post links up to its pillar in the first 300 words, and every pillar links down to every cluster post. Every post also links to one service page.

Cluster A: Meta ads (pillar: Meta Ads for Ecommerce: The Complete 2026 Guide, /blog/meta-ads)

- Meta Ads Library: How to Find Winning Ecommerce Ads (also a pillar for creative research, see Cluster B)
- Meta Andromeda Explained: What Changed for Ecommerce Ads
- Facebook Ads for Shopify: The 2026 Setup
- BFCM 2026: The Meta Ads Playbook for Shopify Brands
- Service page: /growth (main), home page (secondary)

Because the Meta Ads pillar publishes on Tue 15 Dec, after four of its cluster posts, the earlier posts link to it on 15 Dec in a planned update (add the link in the intro and in the "next steps" box).

Cluster B: Creative research (pillar: Meta Ads Library: How to Find Winning Ecommerce Ads, /blog/meta-ads-library)

- Meta Andromeda Explained (creative diversity section links to the Ads Library pillar)

- BFCM 2026 playbook (the "study last year's BFCM ads" step links to the pillar)
- DTC Brands: 20 Brands Scaling With Meta Ads (each brand entry links to its Ad Library search and back to the pillar)
- Service page: /viral-creatives and /growth

Cluster C: DTC growth metrics and store (pillar: DTC Brands: 20 Brands Scaling With Meta Ads and What They Do, /blog/dtc-brands)

- What Is ROAS? Good ROAS by Industry and How to Calculate It
- LTV:CAC for DTC Brands: Benchmarks and How to Fix It
- MER vs ROAS: Which Number Should Run Your Ad Budget
- Shopify Store Optimization: 15 Fixes That Lift Conversion
- Tool: /roas-calculator (linked from ROAS, MER and LTV:CAC posts)
- Service pages: /growth (metrics posts), /shopify-agency (store optimization post)

Sibling links (one row per post, used in the briefs below):

7.3 Post briefs

BFCM 2026: The Meta Ads Playbook for Shopify Brands

- Title (H1): BFCM 2026: The Meta Ads Playbook for Shopify Brands
- URL slug: /blog/bfcm-meta-ads-playbook
- Title tag: BFCM 2026: Meta Ads Playbook for Shopify | Brand Scaling (56)
- Meta description: BFCM 2026 runs 26 to 30 Nov. Our Meta ads playbook for Shopify brands: dates, budget plan, offers and creative that hit 3.98x ROAS. Read it now. (144 characters)
- Primary keyword: bfcm (2,900 a month, -3% a year, +185% last 3 months)
- Secondary and question keywords: black friday ads; what is bfcm in marketing; bfcm dates 2026; when is bfcm 2026; how long is bfcm; what is bfcm on shopify; best bfcm ads; best black friday ad campaigns; what is bfcm on tiktok (all from Google autocomplete)

- Search intent: informational with a commercial edge. Shopify founders and marketers planning Black Friday ads this month.
- Target length: 2,500 words.
- Who it is for: Shopify brand owners and in-house marketers spending $10K+ a month on Meta who want a day-by-day plan for 3 Nov to 30 Nov 2026.
- Publish: Tue 3 Nov 2026 (must go live between Mon 2 and Fri 6 Nov).

Direct answer (opening paragraph):

BFCM stands for Black Friday Cyber Monday, the biggest sales weekend in ecommerce. In 2026 it runs from Thanksgiving on Thursday 26 November through Black Friday on 27 November to Cyber Monday on 30 November. For Meta ads, the brands that win build creative and audiences in early November, open early access offers mid-month and scale with cost controls during the peak.

Outline:

- H2: What is BFCM in marketing?
  - Definition box (2 sentences). Note that Shopify merchants use "BFCM" for the whole Cyber Week, and many brands now run offers for 2 to 4 weeks.
- H2: BFCM 2026 dates and the Meta ads timeline
  - Table: Date, Day, What to do in Meta. Rows: Tue 3 to Fri 13 Nov (creative production and testing), Mon 16 to Wed 25 Nov (early access and list building), Thu 26 Nov (Thanksgiving), Fri 27 Nov (Black Friday), Sat 28 Nov (Small Business Saturday), Sun 29 Nov, Mon 30 Nov (Cyber Monday), Tue 1 to Fri 4 Dec (extended and last-chance offers).
  - Visual: horizontal timeline graphic.
- H2: Phase 1, 3 to 13 November: build the creative bank
  - H3: How many ads to make: 20+ variations, testing for volume and scaling only the winners (the site case "Creative strategy: test for volume, scale for impact").
  - H3: Use the Meta Ads Library to study last year's BFCM ads: link to the Ads Library pillar (live 17 Nov; link the YouTube video until then).
  - H3: BFCM hook angles: urgency, biggest-drop-of-the-season, gift-giving, bundle value.
- H2: Phase 2, 16 to 25 November: early access and warm audiences
  - H3: Early access offer and email or SMS sign-up ads.
  - H3: Proof: "Scaling early BFCM offers to $112,866 in 13 days with Meta ads" at 3.98x ROAS (link the case).
  - H3: Teasers 3 days before launch: email and ads with "biggest drop of the season" lines (from the site case).
- H2: Phase 3, 26 to 30 November: scale without burning margin
  - H3: Campaign structure: Advantage+ shopping campaigns plus cost-controlled campaigns with bid caps and cost caps (the women's fashion case: $16,630 spent, $59,241 revenue, 3.56 ROAS during BFCM).
  - H3: Budget pacing by day and hour: when to raise budgets (the site case "BFCM morning surge: $7,734 by 11:00 AM").
  - H3: What to watch hourly: CPM, CPA vs break-even, stock levels, site speed.
  - H3: Proof box: $20,000 day at 39% net profit margin; 9.01x ROAS on $2,551 spend; $86,272 revenue on $11,886 spend in November (7.25x).
- H2: BFCM offers that work on Meta
  - Comparison table: Offer type, Best for, Margin risk, Example. Rows: % off sitewide, tiered spend-and-save, bundles, quantity breaks, gift with purchase, free shipping threshold.
  - Link to /roas-calculator: check break-even ROAS for each discount level.

- H2: What the best BFCM ads have in common
  - 6 patterns with a screenshot of each (from Ads Library, cropped, no copying): offer in the first second, clear end date, product in use, social proof, price anchor, one CTA.
- H2: BFCM on TikTok and Shopify: quick notes
  - H3: What is BFCM on TikTok: Spark Ads with creator content, short hooks.
  - H3: What is BFCM on Shopify: Shopify's live BFCM sales data and checkout load; checklist to test checkout and apps before 26 Nov.
- H2: After Cyber Monday: keep the new customers
  - Post-purchase flows, December gift campaigns, retargeting buyers with bundles. Link to the LTV:CAC post (planned) and /growth.
- H2: BFCM 2026 checklist
  - Downloadable checklist (20 items, by date).
- H2: FAQ
- CTA box: "Want us to run your BFCM? Only 5 spots are available for Gaurav to work on your store personally" (an offer from Gaurav's own posts on the site; use it only if still true; otherwise "Book a Brand Growth Audit").

Content ideas:

- BFCM 2026 day-by-day Meta timeline graphic (3 Nov to 4 Dec).
- Offer vs margin table with break-even ROAS per discount level, linked to /roas-calculator.
- Case study box from the site: early BFCM $112,866 in 13 days at 3.98x ROAS, with the dashboard screenshot.
- 20-item BFCM checklist as a printable PDF (email gate optional).
- Embed an @gauravecom YouTube video on Q4 or BFCM scaling if one exists [fill in], otherwise the Meta Ads Library video once it is live.

FAQ:

1. When is BFCM 2026? Black Friday is Friday 27 November 2026 and Cyber Monday is Monday 30 November 2026. Most brands run offers across the whole Cyber Week from Thanksgiving, Thursday 26 November.
2. How long is BFCM? The core event is the 5 days from Thanksgiving to Cyber Monday. Many Shopify brands start early access offers 1 to 2 weeks before and extend into early December.
3. What is BFCM on Shopify? On Shopify, BFCM means the Black Friday Cyber Monday sales period, when merchants run their biggest discounts. Test checkout, apps and site speed before the peak traffic starts.
4. When should I start Black Friday ads on Meta? Start building and testing creative in the first half of November, open early access in the second half, and put most budget in from Thanksgiving to Cyber Monday.
5. What are the best BFCM ads? The best BFCM ads show the offer and the end date in the first seconds, show the product in use and use one clear call to action. Study last year's ads in the Meta Ads Library before you brief creative.

- Internal links: pillar Meta Ads for Ecommerce (add on 15 Dec) and Meta Ads Library pillar (add on 17 Nov); service page /growth; siblings: What Is ROAS? (add on 1 Dec) and Facebook Ads for Shopify (add on 8 Dec); tool /roas-calculator; 4 BFCM case pages.
- CTA: Book a Brand Growth Audit before your BFCM launch.

Meta Ads Library: How to Find Winning Ecommerce Ads

- Title (H1): Meta Ads Library: How to Find Winning Ecommerce Ads
- URL slug: /blog/meta-ads-library
- Title tag: Meta Ads Library: How to Find Winning Ads | Brand Scaling (57)

- Meta description: How to use the Meta Ads Library to find winning ecommerce ads: search, filters, signals of a winner and a swipe file system. Watch the video guide. (147 characters)
- Primary keyword: meta ads library (90,500 a month, +124% a year, difficulty 7)
- Secondary and question keywords: what is meta ads library; how to use meta ads library; how to search meta ads library; how to download meta ads library video; is meta ads library free; meta ads library login; meta ads library api; why is meta ads library not working; meta ad library search by id; meta ad library sort by impressions; meta ads library instagram; meta ads library tool (all from Google autocomplete)
- Search intent: navigational and informational. People who want to open the tool and learn how to use it for ad research.
- Target length: 3,500 words plus video.
- Who it is for: DTC founders, media buyers and creative strategists who want to research competitors' Facebook and Instagram ads before they brief creative.
- Video: embed Gaurav's YouTube video "Meta Ads Library: How to Find Winning Ads in 2026" (@gauravecom, in production this week) directly under the direct answer. Add chapters in the YouTube description that match the H2s below, and link the video description back to this post.

Direct answer (opening paragraph):

The Meta Ads Library is Meta's free, public database of every active ad running on Facebook, Instagram, Messenger and Meta's other apps. You can search it by keyword or advertiser, filter by country, platform and media type, and see when each ad started running. Ecommerce brands use it to find winning ads: the ones competitors keep running for weeks.

Outline:

- H2: What is the Meta Ads Library?
  - Definition box. What it shows (active ads, start date, platforms, ad versions) and what it does not show (spend, ROAS and conversions for commercial ads outside the EU). Link to the official Ad Library.
  - [Video embed: Meta Ads Library: How to Find Winning Ads in 2026]
- H2: How to use the Meta Ads Library, step by step
  - H3: Step 1: open the Ad Library (no ad account needed; logging in is optional).
  - H3: Step 2: pick the country and "All ads".
  - H3: Step 3: search by keyword or advertiser name.
  - H3: Step 4: filter by active status, platform (Instagram, Facebook), media type (video, image), language and date range.
  - H3: Step 5: open the advertiser page to see all their active ads.
  - Visual: annotated screenshot of each step. Verify filter names in the live tool on the day screenshots are taken.
- H2: How to find winning ads: 6 signals
  - H3: Long run time (an ad running 30+ days is likely profitable).
  - H3: Many versions of one concept (the brand is scaling it).
  - H3: The same creative across many ad sets or placements.
  - H3: New angles from big spenders in your niche every week.
  - H3: Landing page and offer behind the ad.
  - H3: Comment volume on the organic post version.
  - Scorecard table: Signal, What to check, Score 0 to 2.
- H2: How to search the Meta Ads Library like a media buyer
  - H3: Keyword searches that work for ecommerce ("free shipping", "bundle", "limited drop", "shop now" plus niche words).
  - H3: Meta ad library search by ID (when you have an ad ID from a link).

    - H3: Meta Ads Library for Instagram only.
    - H3: Can you sort by impressions? Explain what the current tool supports and what it does not; check live before publishing.
- H2: How to download Meta Ads Library videos (and what you may do with them)
    - Legit uses: internal swipe files and creative briefs. Do not re-upload competitors' ads. Short note on browser save options and third-party downloaders without endorsing one.
- H2: Build a swipe file and turn it into briefs
    - H3: Swipe file columns: brand, hook, angle, format, run time, offer, landing page.
    - H3: From swipe to brief: how Brand Scaling turns 10 found ads into a 45+ hook and angle matrix.
    - H3: Example: a skincare brand brief, with the result from the site case ($146,184 in 27 days at 3.64x ROAS).
- H2: Meta Ads Library API: is it free and who can use it?
    - What the API covers, that access needs a Meta developer account and identity confirmation, and that for most brands the web tool is enough. Link Meta's official API page; verify scope before publishing.
- H2: Meta Ads Library tools (third-party)
    - What paid ad-spy tools add (saved boards, alerts, history) and when the free library is enough. No affiliate links.
- H2: Why is the Meta Ads Library not working?
    - Common fixes: wrong country, ad category set to issues or elections, browser extensions, login loops, outages.
- H2: Meta Ads Library examples: 5 ecommerce ads broken down
    - 5 screenshots with a 3-line breakdown each (hook, angle, offer). Pick DTC brands in skincare, supplements, apparel, jewelry and home.
- H2: How the Ads Library fits into your Meta strategy
    - Link down to Meta Andromeda Explained (creative diversity) and up to the Meta Ads for Ecommerce pillar.
- H2: FAQ
- CTA box: "Get a winning-ads research brief for your brand: book a Brand Growth Audit."

Content ideas:

- The embedded YouTube video with chapters and a full transcript in an expandable block (also helps AI crawlers).
- Annotated 5-step screenshot walkthrough of the live Ad Library.
- "Winning ad scorecard" table readers can copy.
- Swipe file template (Google Sheet) with the 7 columns above.
- 5 ecommerce ad breakdowns, each with run time and number of versions on the day checked.

FAQ:

1. Is the Meta Ads Library free? Yes. The Ads Library is free and public, and you can search active ads without running ads yourself.
2. Do I need to log in to use the Meta Ads Library? No. You can search the library in a normal browser; logging in to Facebook is optional and is only needed for some saved settings and API access.
3. Can you see ad spend in the Meta Ads Library? Not for normal commercial ads in the US. Spend ranges are shown for ads about social issues, elections or politics, and more data is shown for ads delivered in the EU.
4. How do I find winning ads in the Meta Ads Library? Look for ads that have been active for 30 days or more, concepts with many versions, and brands that keep launching new versions of the same angle. These are signs the ad is profitable.

5. Why is the Meta Ads Library not working? Check that the country and "All ads" category are set correctly, turn off browser extensions and try a private window. If it still fails, Meta's tool may be down for a short time.

- Internal links: pillar Meta Ads for Ecommerce (add on 15 Dec); service pages /viral-creatives and /growth; siblings: Meta Andromeda Explained (add on 24 Nov) and DTC Brands (add on 12 Jan); BFCM post.
- CTA: Book a Brand Growth Audit (creative research included).

Meta Andromeda Explained: What Changed for Ecommerce Ads

- Title (H1): Meta Andromeda Explained: What Changed for Ecommerce Ads
- URL slug: /blog/meta-andromeda
- Title tag: Meta Andromeda Explained for Ecommerce Ads | Brand Scaling (58)
- Meta description: Meta Andromeda changed how Meta picks which ads to show. What it means for ecommerce: creative diversity, simpler campaigns and new testing rules. (146 characters)
- Primary keyword: meta andromeda (1,300 a month, +295% a year)
- Secondary and question keywords: what is meta andromeda; how meta andromeda works; meta andromeda creative diversity; meta andromeda campaign structure; meta andromeda vs gem; meta andromeda best practices; is meta andromeda live; meta andromeda update 2026 (all from Google autocomplete)
- Search intent: informational. Media buyers and founders who noticed performance changes and want to know what to do.
- Target length: 2,200 words.
- Who it is for: brands spending $10K+ a month on Meta whose old campaign structures (many small ad sets, interest targeting) stopped scaling.

Direct answer (opening paragraph):

Meta Andromeda is the AI system Meta uses to pick which ads from millions of candidates could be shown to each person, before the final ranking step. Meta described it on its engineering blog in December 2024. For ecommerce brands it means creative variety now decides reach: fewer, broader campaigns with many genuinely different ads beat narrow targeting.

Outline:

- H2: What is Meta Andromeda?
  - Definition box. Source: Meta Engineering, "Meta Andromeda: Supercharging Advantage+ automation with the next-gen personalized ads retrieval engine" (2 Dec 2024). Explain "retrieval" in plain words.
- H2: How Meta Andromeda works (retrieval, then ranking)
  - H3: Step 1: retrieval narrows millions of ads to a short list per person.
  - H3: Step 2: ranking models pick the final ad and price in the auction.
  - Visual: simple funnel diagram (all ads, retrieved ads, ranked ads, shown ad).
- H2: Meta Andromeda vs GEM
  - Andromeda chooses candidates; GEM is the large ads ranking model Meta has described separately. Link Meta's official GEM post; verify wording before publishing.
- H2: Meta Andromeda and creative diversity
  - Why near-duplicate ads now compete for the same slot; what "different" means (new hook, new angle, new format, new person on camera, not just a new headline).
  - H3: The 45+ hook and angle matrix Brand Scaling uses (from the site).
- H2: Meta Andromeda campaign structure
  - H3: Consolidate: fewer campaigns, broad targeting, Advantage+ (the site case: "Consolidated ad sets into simplified broad-targeting Advantage+ campaigns for maximum scale").

    - H3: When cost caps and bid caps still help (site case: $54,552 in 7 days on $13,195 spend, 4.43 ROAS, with winning ad sets duplicated at 20% higher bid caps).
    - Before and after diagram of an account structure.
- H2: Meta Andromeda best practices for ecommerce
    - Numbered checklist of 8: creative volume per week, concept vs iteration split, testing inside one campaign, landing page match, signal quality (Conversions API), patience windows, reading results on MER, refresh cadence.
- H2: What did not change
    - Offer, product, landing page and margins still decide profit. Link to Shopify Store Optimization (planned) and /roas-calculator.
- H2: Is Meta Andromeda live? What it means in 2026
    - State what Meta has published; avoid unconfirmed claims; write the date checked.
- H2: FAQ
- CTA box: "Not sure your account is built for Andromeda? Book a Brand Growth Audit."

Content ideas:

- Retrieval vs ranking funnel diagram.
- Account structure before and after (old 12 ad sets vs consolidated).
- Creative diversity checklist: "Is this a new concept or just an iteration?"
- Case study box: consolidation result from a Brand Scaling case page.
- Clip from the Meta Ads Library YouTube video on finding diverse creative angles.

FAQ:

1. What is Meta Andromeda? Meta Andromeda is Meta's ads retrieval system: it chooses which ads could be shown to each person before ranking models pick the final ad. Meta introduced it on its engineering blog in December 2024.
2. Is Meta Andromeda live? Meta has said Andromeda powers ads retrieval for Advantage+ automation. Every advertiser is affected, so you do not opt in or out.
3. What is the best campaign structure for Meta Andromeda? For most ecommerce brands: fewer campaigns, broad targeting and many clearly different creatives inside each campaign, with cost controls only where margins need them.
4. Does Meta Andromeda mean targeting no longer matters? Interest targeting matters much less than before. Your creative now does most of the targeting, because different hooks and angles reach different people.
5. How many creatives do I need for Meta Andromeda? Enough to test new concepts every week. Brand Scaling ships 30 to 50+ angle iterations a month for partner brands so accounts do not fatigue.

- Internal links: pillar Meta Ads for Ecommerce (add on 15 Dec); service page /growth; siblings: Meta Ads Library and Facebook Ads for Shopify (add on 8 Dec).
- CTA: Book a Brand Growth Audit.

What Is ROAS? Good ROAS by Industry and How to Calculate It

- Title (H1): What Is ROAS? Good ROAS by Industry and How to Calculate It
- URL slug: /blog/what-is-roas
- Title tag: What Is ROAS? Formula and Good ROAS | Brand Scaling (51)
- Meta description: What is ROAS? Return on ad spend = revenue divided by ad spend. See the formula, break-even ROAS, real client ROAS by niche and a free calculator. (146 characters)
- Primary keyword: what is roas (3,600 a month, +17% a year)

- Secondary and question keywords: what is roas in marketing; what is roas formula; roas how to calculate; what should roas be; what is a good roas; what is good roas for ecommerce; what is good roas in meta ads; roas vs roi; roas vs mer; roas vs cac; roas calculator break even; how to calculate roas in meta ads (all from Google autocomplete)
- Search intent: informational. Founders and junior marketers learning the metric, many of them close to a buying decision about ads.
- Target length: 2,200 words.
- Who it is for: Shopify owners running or about to run paid ads who need to know whether their ROAS is good.

Direct answer (opening paragraph):

ROAS (return on ad spend) is the revenue your ads bring in divided by what you spent on them. If you spend $1,000 on Meta ads and they drive $4,000 in sales, your ROAS is 4.0, often written 4x. A good ROAS is any number above your break-even ROAS, which depends on your margins. Use our free ROAS calculator to find yours.

Outline:

- H2: What is ROAS in marketing?
  - Definition box with formula. Platform ROAS vs blended ROAS.
- H2: How to calculate ROAS (formula and examples)
  - H3: The ROAS formula: revenue from ads / ad spend.
  - H3: Worked example from a real Shopify store: $146,184 revenue on $40,123.73 spend = 3.64x (site case).
  - H3: How to calculate ROAS in Meta Ads Manager: the "Purchase ROAS" column, attribution setting, where it misleads.
- H2: What is a good ROAS?
  - H3: Break-even ROAS = 1 / gross margin. Table: margin 30%, 40%, 50%, 60%, 70% and the matching break-even ROAS (3.33, 2.5, 2.0, 1.67, 1.43).
  - H3: Good ROAS for ecommerce: why "4x" is a myth without margins.
  - H3: What is a good ROAS in Meta ads?
- H2: Good ROAS by industry: what we see in client accounts
  - Original data table built only from Brand Scaling case pages: Niche, Spend, Revenue, ROAS, Period, Link. Rows: skincare (3.64x, 27 days), supplements (3.89x month; 4.50x with $145 AOV), jewelry (4.43x, 7 days), women's fashion during BFCM (3.56x), fitness (4.37x in 6.5 hours), European DTC (3.48x). State clearly: "these are results from our accounts, not industry averages".
- H2: ROAS vs ROI vs MER vs CAC
  - Comparison table: metric, formula, what it tells you, when to use it. Link to MER vs ROAS (29 Dec) and LTV:CAC (22 Dec).
- H2: How to improve ROAS: 7 levers
  - Numbered list: creative (new angles), offer (bundles, quantity breaks), AOV, landing page CVR, audience consolidation, bid strategy, tracking quality. One case link each where possible.
- H2: Use the free ROAS calculator
  - Short explanation and link to /roas-calculator with a screenshot.
- H2: FAQ
- CTA box: "ROAS stuck below break-even? Book a Brand Growth Audit."

Content ideas:

- Break-even ROAS by margin table.
- Client ROAS by niche table (original data, links to case pages).
- Embedded /roas-calculator widget or a screenshot plus link.

- ROAS vs ROI vs MER vs CAC comparison table.
- Annotated Meta Ads Manager screenshot of the Purchase ROAS column.

FAQ:

1. What should ROAS be? Your ROAS should be above your break-even ROAS, which is 1 divided by your gross margin. A brand with a 50% margin breaks even at 2.0x and needs more than that to profit after other costs.
2. Is a 4x ROAS good? For most ecommerce brands with 50% to 70% gross margins, 4x is healthy. For a low-margin product it may only just cover costs, so always compare it with your break-even ROAS.
3. What is the difference between ROAS and ROI? ROAS compares revenue with ad spend only. ROI compares profit with all costs, so a campaign can have a high ROAS and still lose money.
4. How do I calculate ROAS in Meta ads? Meta shows it as Purchase ROAS: the purchase value it attributes to your ads divided by the amount spent. Check the attribution setting, because Meta may count sales other channels also influenced.
5. What is a good ROAS for ecommerce? There is no single number. In Brand Scaling client accounts, scaled campaigns have run between about 3.5x and 4.5x on Meta, but what matters is your margin and your blended MER.

- Internal links: pillar DTC Brands (add on 12 Jan); service page /growth; tool /roas-calculator; siblings: MER vs ROAS (add on 29 Dec) and LTV:CAC (add on 22 Dec); Meta Ads pillar (add on 15 Dec).
- CTA: Use the free ROAS calculator, then book a Brand Growth Audit.

Facebook Ads for Shopify: The 2026 Setup

- Title (H1): Facebook Ads for Shopify: The 2026 Setup
- URL slug: /blog/facebook-ads-for-shopify
- Title tag: Facebook Ads for Shopify: The 2026 Setup | Brand Scaling (56)
- Meta description: Facebook ads for Shopify, set up right: connect the Facebook and Instagram app, pixel and Conversions API, first campaign, budget and creative plan. (148 characters)
- Primary keyword: facebook ads for shopify (320 a month, 0% a year)
- Secondary and question keywords: how to run facebook ads for shopify store; how to set up facebook ads for shopify; how to connect facebook ads to shopify; facebook ads pixel shopify; how much are facebook ads for shopify; facebook ads library shopify (all from Google autocomplete)
- Search intent: commercial and how-to. Store owners setting up or fixing their first Meta campaigns.
- Target length: 2,000 words.
- Who it is for: Shopify brands starting paid social or restarting it after poor results, especially those near the $10K a month spend level.

Direct answer (opening paragraph):

To run Facebook ads for a Shopify store in 2026, connect Shopify's Facebook and Instagram app to your Meta Business account, turn on the pixel and Conversions API with maximum data sharing, verify your domain, then launch one Advantage+ sales campaign with 5 to 10 different creatives. Start with a daily budget you can hold for 7 days.

Outline:

- H2: Before you start: what you need
  - Checklist: Meta Business account, ad account, Facebook page, Instagram account, Shopify admin access, product catalog, verified domain.
- H2: How to connect Facebook ads to Shopify
  - H3: Install the Facebook and Instagram app from the Shopify App Store.
  - H3: Connect the business assets.

    - H3: Data sharing level and Conversions API.
    - H3: Domain verification and events.
    - Screenshot walkthrough; verify app and menu names on the day of writing.
- H2: Facebook ads pixel for Shopify: check your tracking
    - Events to see: PageView, ViewContent, AddToCart, InitiateCheckout, Purchase. How to test in Events Manager.
- H2: How to run Facebook ads for a Shopify store: your first campaign
    - H3: Campaign: Advantage+ sales (or a manual sales campaign with broad targeting).
    - H3: Creative: 5 to 10 distinct concepts; link to Meta Andromeda Explained for why.
    - H3: Landing pages: product page vs collection vs dedicated landing page; link to /shopify-agency.
- H2: How much are Facebook ads for Shopify?
    - Budget logic: daily budget = target CPA x 50 conversions per week / 7 as an aim, and the honest minimum for testing. Use /roas-calculator for break-even.
- H2: Creative that sells on Shopify
    - Hooks, UGC, founder videos. Use the Facebook ads library for Shopify competitor research (link the pillar).
- H2: Reading results and scaling
    - When to kill, when to iterate, when to scale (+20% budget steps vs new campaign). Case: $24,930 in 15 days with 422 orders for a 15-day-old brand.
- H2: Common mistakes
    - Audience overlap, too many ad sets, retargeting overload, small budgets with manual bids (all from Gaurav's own posts on the site).
- H2: FAQ
- CTA box: "Want this set up and run for you? Book a Brand Growth Audit."

Content ideas:

- Screenshot walkthrough of the Shopify Facebook and Instagram app setup.
- Pixel event test checklist.
- Budget calculator table (target CPA vs daily budget).
- Common mistakes list taken from Gaurav's posts ("audience overlap", "small budgets don't work with manual bidding").
- Case box: 15-day-old brand to $24,930 with 422 orders.

FAQ:

1. How do I connect Facebook ads to Shopify? Install the Facebook and Instagram app in Shopify, connect your Meta Business account, ad account, page and pixel, and set data sharing to maximum so the Conversions API sends purchase events.
2. How much should I spend on Facebook ads for my Shopify store? Spend enough to get steady purchase data every week. Many brands start testing with a daily budget around 2 to 3 times their target cost per purchase and scale from there.
3. Do Facebook ads still work for Shopify stores? Yes. Brand Scaling clients still scale on Meta, for example a 15-day-old brand that reached $24,930 in 15 days with 422 orders, but creative volume and tracking quality matter more than before.
4. Should I use Advantage+ shopping campaigns? For most Shopify brands with working tracking and enough creative, yes. Keep a manual campaign only for controlled tests or cost-capped scaling.

5. Can I see my competitors' Shopify ads? Yes. Search the brand in the Meta Ads Library to see all its active Facebook and Instagram ads and how long each has run.

Meta Ads for Ecommerce: The Complete 2026 Guide

- Title (H1): Meta Ads for Ecommerce: The Complete 2026 Guide
- URL slug: /blog/meta-ads
- Title tag: Meta Ads for Ecommerce: 2026 Guide | Brand Scaling (50)
- Meta description: Meta ads for ecommerce in 2026: how Meta ads work, costs, campaign structure, creative, tracking and scaling, with real results from $50M+ in spend. (148 characters)
- Primary keyword: meta ads (49,500 a month, +70% a year, difficulty 54)
- Secondary and question keywords: what is meta ads; how meta ads work; how meta ads algorithm works; how meta ads auction works; meta ads cost; meta ads cost per day; meta ads vs google ads; meta ads vs tiktok ads; meta ads vs boost post; is meta ads worth it; why meta ads not spending; how to turn off advantage+; best meta ads agency; meta ads strategy for ecommerce (all from Google autocomplete)
- Search intent: commercial and informational. A long-term target: this page ranks over time as the easier Meta posts link to it.
- Target length: 4,000 words.
- Who it is for: ecommerce founders and marketing leads who want one reference for running Meta ads profitably.

Direct answer (opening paragraph):

Meta ads are paid ads on Facebook, Instagram, Messenger and Meta's other apps, bought in an auction and delivered by Meta's AI to the people most likely to act. For ecommerce in 2026, Meta ads work best with broad targeting, many distinct creatives, accurate purchase tracking and an offer that keeps ROAS above break-even while you scale.

Outline:

- H2: What are Meta ads?
  - Placements, formats, objectives. Meta ads vs Facebook ads naming.
- H2: How Meta ads work in 2026
  - H3: The auction: bid, estimated action rate, ad quality.
  - H3: The algorithm: Andromeda retrieval and ranking (link down to Meta Andromeda Explained).
  - H3: Advantage+ automation: what to leave on and how to turn off Advantage+ settings when needed.
- H2: How much do Meta ads cost?
  - CPM, CPC and CPA drivers, Q4 cost rise; how to set a daily budget from target CPA. Link /roas-calculator. Say "costs vary by niche" and show Brand Scaling spend vs revenue examples instead of invented averages.
- H2: Meta ads strategy for ecommerce: the account structure
  - Diagram: prospecting (Advantage+ sales), testing campaign, cost-cap scaling campaign, retention. Proof: $2.3M at 11.6x ROAS on $200K spend; $1.6M on $140K at 11.98x.
- H2: Creative: the biggest lever
  - H3: Research with the Meta Ads Library (link pillar).
  - H3: The hook and angle matrix (45+).
  - H3: Formats: UGC, founder, demo, static, carousel.
  - H3: Testing cadence: 30 to 50+ iterations a month.

- H2: Tracking: pixel, Conversions API and what to trust
  - Platform ROAS vs MER; link MER vs ROAS (29 Dec).
- H2: Scaling Meta ads without killing ROAS
  - Vertical vs horizontal scaling; cost caps and bid caps; when to duplicate (site case with 20% higher bid caps).
- H2: Meta ads vs Google ads vs TikTok ads
  - Comparison table: intent, creative needs, cost, best for. Recommendation: Meta for demand creation, Google Shopping for capture, TikTok for creator reach.
- H2: Why Meta ads are not spending (and other problems)
  - Troubleshooting list.
- H2: Is Meta advertising worth it for ecommerce?
  - Honest answer with case proof and when it is not (no margin, no product-market fit).
- H2: Seasonal playbooks
  - Link to the BFCM 2026 post.
- H2: How to choose a Meta ads agency
  - 6 questions; soft pitch for Brand Scaling with link to /growth.
- H2: FAQ
- CTA box.

Content ideas:

- Account structure diagram (4 campaign types).
- Meta vs Google vs TikTok comparison table.
- Case table: 5 biggest Meta results from the site with spend, revenue, ROAS and link.
- Embedded @gauravecom videos: the Meta Ads Library video plus one scaling video [fill in title].
- Troubleshooting checklist for "ads not spending".

FAQ:

1. How do Meta ads work? Advertisers bid in an auction for a chance to show an ad to a person. Meta's AI picks candidate ads, ranks them by bid, predicted action rate and quality, and shows the winner.
2. How much do Meta ads cost per day? You set the daily budget yourself; there is no fixed price. For ecommerce, a useful starting point is a budget that can buy several purchases a day at your target cost per purchase.
3. Is Meta advertising worth it? For ecommerce brands with healthy margins and a product people want, yes: it is still the largest paid social channel for DTC. It is not worth it if your break-even ROAS is higher than the ROAS you can realistically reach.
4. What is the difference between boosting a post and Meta ads? Boosting a post is a simplified ad from your page with limited targeting and objectives. Ads Manager gives full control of objectives, budgets, creative testing and conversion tracking.
5. Meta ads vs Google ads: which is better for ecommerce? Meta creates demand by showing products to people who were not searching; Google captures people already searching. Most scaling brands need both, starting with Meta for new customer growth.

- Internal links: links down to all Cluster A posts (BFCM 2026, Meta Ads Library, Meta Andromeda Explained, Facebook Ads for Shopify) and to What Is ROAS; service pages /growth and home; /roas-calculator; 5 case pages.
- CTA: Book a Brand Growth Audit.

LTV:CAC for DTC Brands: Benchmarks and How to Fix It

- Title (H1): LTV:CAC for DTC Brands: Benchmarks and How to Fix It
- URL slug: /blog/ltv-cac
- Title tag: LTV:CAC for DTC Brands: Benchmarks and Fixes | Brand Scaling (60)
- Meta description: LTV:CAC for DTC brands: the formula, what a good ratio is, payback period and 8 ways to fix a weak ratio with ads, offers and retention. (136 characters)
- Primary keyword: ltv cac (1,300 a month, -14% a year)
- Secondary and question keywords: what is ltv cac ratio; ltv cac formula; how to calculate ltv cac; what ltv cac is good; good ltv to cac ratio; why is 3x ltv cac good; ltv/cac and payback period; how to improve ltv/cac ratio; roas and ltv cac; what's a good ltv to cac for consumer (all from Google autocomplete)
- Search intent: informational, finance-minded founders. Most results are written for SaaS; this post wins by being specific to DTC ecommerce.
- Target length: 2,000 words.
- Who it is for: DTC founders and operators planning 2027 budgets who need to know how much they can pay for a customer.

Direct answer (opening paragraph):

LTV:CAC compares how much gross profit a customer brings over their lifetime (LTV) with what it cost to acquire them (CAC). A ratio of 3:1 is the common benchmark: each customer returns three times their acquisition cost. For DTC brands, measure LTV on gross margin, not revenue, and track 90-day and 12-month LTV separately.

Outline:

- H2: What is the LTV:CAC ratio?
  - Definition box. Why SaaS benchmarks do not transfer directly to DTC (repeat purchase rate, margins, returns).
- H2: How to calculate LTV:CAC for a DTC brand
  - H3: LTV formula: average order value x gross margin x orders per customer over the period.
  - H3: CAC formula: total new-customer marketing spend / new customers.
  - H3: Worked example with a $145 AOV supplement (AOV from the site case), assumed margin and repeat rate clearly labeled as an example.
- H2: What is a good LTV:CAC ratio?
  - H3: Why 3:1 is the common benchmark.
  - H3: DTC by business model: one-time purchase, consumables, subscription. Show as ranges to aim for, labeled as rules of thumb.
- H2: LTV:CAC and payback period
  - Why cash flow matters more for brands that self-fund ads; payback months table.
- H2: ROAS and LTV:CAC: how they connect
  - First-order ROAS vs LTV-based target CAC; link to What Is ROAS and /roas-calculator.
- H2: How to improve your LTV:CAC ratio: 8 fixes
  - H3 x 8: raise AOV (bundles, quantity breaks), post-purchase upsells, retention email and SMS flows, subscription option, creative that attracts better customers, cut wasted spend, improve CVR, raise prices with better offers. Site proof: Riley's brand from $40K a month to $237,000 a month at 42% net margin.
- H2: FAQ
- CTA box.

Content ideas:

- LTV:CAC calculator table (inputs and outputs) or an extension of /roas-calculator.

- Payback period table.
- "8 fixes" checklist with the owner (ads, store, retention) for each.
- Case box: $40K to $237,000 a month at 42% net margin.

FAQ:

1. What is a good LTV to CAC ratio? 3:1 is the most common benchmark. Below 1:1 you lose money on every customer, and far above 5:1 can mean you are under-investing in growth.
2. Why is a 3x LTV:CAC considered good? At 3:1 a customer pays back acquisition cost and still leaves enough gross profit to cover operating costs and profit.
3. How do you calculate LTV:CAC? Divide customer lifetime value (on gross margin) by customer acquisition cost. For example, $180 LTV and $60 CAC gives 3:1.
4. What is a good LTV:CAC for consumer brands? Many consumer brands aim for at least 3:1 over 12 months; brands with one-time purchases often rely on a profitable first order instead.
5. How can I improve LTV:CAC quickly? The fastest levers are higher AOV through bundles and upsells, and retention flows that bring first-time buyers back within 60 days.

- Internal links: pillar DTC Brands (add on 12 Jan); service page /growth; siblings: What Is ROAS and MER vs ROAS (add on 29 Dec); /roas-calculator.
- CTA: Book a Brand Growth Audit (unit economics review included).

MER vs ROAS: Which Number Should Run Your Ad Budget

- Title (H1): MER vs ROAS: Which Number Should Run Your Ad Budget
- URL slug: /blog/marketing-efficiency-ratio
- Title tag: Marketing Efficiency Ratio (MER) vs ROAS | Brand Scaling (56)
- Meta description: Marketing efficiency ratio (MER) is total revenue divided by total marketing spend. See MER vs ROAS, the formula, a good MER and which to budget on. (148 characters)
- Primary keyword: marketing efficiency ratio (260 a month, -15% a year, CPC $39.95)
- Secondary and question keywords: mer marketing (170 a month, +7%); what is marketing efficiency ratio; marketing efficiency ratio formula; how to calculate mer marketing efficiency ratio; marketing efficiency ratio vs roas; mer vs blended roas; what is a good marketing efficiency ratio; marketing efficiency ratio benchmark (questions from Google autocomplete)
- Search intent: informational, high buyer value. Founders who distrust platform ROAS.
- Target length: 1,800 words.
- Who it is for: brands running ads on 2 or more channels whose platform numbers add up to more sales than Shopify shows.

Direct answer (opening paragraph):

Marketing efficiency ratio (MER) is your total revenue divided by your total marketing spend across all channels. ROAS measures one platform or campaign; MER measures the whole business. Use MER to set the overall ad budget and ROAS to decide which campaigns and creatives get that budget. If both rise together, your growth is real.

Outline:

- H2: What is marketing efficiency ratio (MER)?
  - Definition box and formula.
- H2: How to calculate MER
  - Worked example: Shopify revenue for the month / (Meta + Google + TikTok + agency and creator costs if you include them). Show both versions and pick one definition for reporting.

- H2: MER vs ROAS: the difference
  - Comparison table: scope, data source, attribution bias, best use.
  - H3: Why platform ROAS adds up to more than your real sales (double counting across channels).
  - H3: MER vs blended ROAS: when people mean the same thing.
- H2: What is a good marketing efficiency ratio?
  - Break-even MER from contribution margin; table by margin. Rules of thumb labeled as such.
- H2: Which number should run your ad budget?
  - Decision rule: total budget on MER and contribution margin, allocation on platform ROAS and incrementality tests. Example from a site case: $132,832 ad spend and $374,103 revenue in 16 days (2.82).
- H2: How to report MER weekly
  - Simple weekly sheet: revenue, new customer revenue, spend by channel, MER, new customer CAC.
- H2: FAQ
- CTA box: "Want a weekly MER dashboard for your brand? Book a Brand Growth Audit."

Content ideas:

- MER vs ROAS comparison table.
- Weekly MER report template (Google Sheet).
- Break-even MER by margin table.
- Case box with spend and revenue from a site case.

FAQ:

1. What is a good marketing efficiency ratio? It depends on your margins. A brand needs an MER above 1 divided by its contribution margin before marketing to break even; many DTC brands aim for 3 or more.
2. How do you calculate MER? Divide total revenue for a period by total marketing spend for the same period. $300,000 revenue on $100,000 spend is an MER of 3.0.
3. Is MER the same as blended ROAS? Often yes: both divide total revenue by total ad spend. Some teams include agency and creator costs in MER, so define it once and keep it.
4. Should I use MER or ROAS? Use both: MER for the total budget and business health, ROAS for choosing which campaigns and ads get money.
5. Why is my Meta ROAS higher than my MER? Meta takes credit for sales it influenced, including some that other channels or returning customers would have brought anyway, so platform ROAS usually runs higher than MER.

- Internal links: pillar DTC Brands (add on 12 Jan); service page /growth; tool /roas-calculator; siblings: What Is ROAS and LTV:CAC for DTC Brands.
- CTA: Book a Brand Growth Audit.

Shopify Store Optimization: 15 Fixes That Lift Conversion

- Title (H1): Shopify Store Optimization: 15 Fixes That Lift Conversion
- URL slug: /blog/shopify-store-optimization
- Title tag: Shopify Store Optimization: 15 Fixes | Brand Scaling (52)
- Meta description: Shopify store optimization that lifts conversion: 15 fixes for speed, product pages, offers and checkout from an agency with a 5.25% CVR case study. (148 characters)
- Primary keyword: shopify store optimization (210 a month, +42% a year)
- Secondary and question keywords: product page optimization (110 a month, +4%); shopify store speed optimization; shopify store seo optimization; product page optimization shopify; best product page design shopify; what is shopify cro; shopify cro audit (questions from Google autocomplete)

- Search intent: commercial. Store owners looking for fixes or for someone to do them.
- Target length: 2,500 words.
- Who it is for: Shopify brands with traffic from ads whose conversion rate is under 2% to 3%.

Direct answer (opening paragraph):

Shopify store optimization means changing your store so more visitors buy: faster mobile pages, product pages that answer objections, stronger offers and a checkout with fewer steps. The 15 fixes below are the ones that move conversion rate most in Brand Scaling client stores, including one store that hit a 5.25% conversion rate in a $61,000 month.

Outline:

- H2: Start here: measure before you change anything
  - Baseline: CVR by device, add-to-cart rate, checkout completion, AOV. Shopify Analytics and GA4 paths.
- H2: Speed fixes (1 to 4)
  - H3: 1. Cut apps you do not use.
  - H3: 2. Compress and lazy-load images.
  - H3: 3. Use a fast theme and remove heavy sliders and videos above the fold on mobile.
  - H3: 4. Aim for sub-1 second perceived load on mobile (the site's "Sub-1s Mobile Shopify" standard).
- H2: Product page optimization (5 to 9)
  - H3: 5. Headline that names the outcome, not just the product.
  - H3: 6. Images and video showing the product in use (UGC).
  - H3: 7. Reviews and proof near the add to cart button.
  - H3: 8. Answer the top 5 objections (shipping, returns, sizing, results, ingredients).
  - H3: 9. Sticky add to cart on mobile.
  - Visual: annotated best product page design for Shopify (mockup, no competitor copying).
- H2: Offer and AOV fixes (10 to 12)
  - H3: 10. Bundles and quantity breaks (site case: $7,597 single day with quantity breaks).
  - H3: 11. Free shipping threshold above current AOV.
  - H3: 12. Post-purchase upsell.
- H2: Checkout fixes (13 to 14)
  - H3: 13. Express checkout options visible.
  - H3: 14. Remove surprise costs and extra fields.
- H2: Fix 15: match the landing page to the ad
  - The ad's hook must continue on the page; dedicated landing pages per angle. Link to Facebook Ads for Shopify.
- H2: Shopify store SEO optimization basics
  - Short section: titles, collection page text, image alt; link to a Shopify Help Center source.
- H2: What is a Shopify CRO audit?
  - What Brand Scaling checks; link to /shopify-agency.
- H2: FAQ
- CTA box: "Get a Shopify CRO audit."

Content ideas:

- 15-point checklist as a downloadable PDF.
- Annotated product page mockup.

- Before and after table from the 5.25% CVR case (what changed).
- Speed test walkthrough (PageSpeed Insights screenshots).
- Short video clip from the "E-Commerce Conversion Hacks Intensive LIVE" replay if Gaurav approves reuse.

FAQ:

1. What is Shopify store optimization? It is the work of making a Shopify store convert more visitors into buyers through speed, product page, offer and checkout improvements, measured by conversion rate and AOV.
2. What is a good conversion rate for a Shopify store? Many stores convert around 1% to 3%, depending on traffic source and price. One Brand Scaling client reached 5.25% in a $61,000 month.
3. How do I speed up my Shopify store? Remove unused apps, compress images, lazy-load anything below the fold and use a lightweight theme. Test mobile speed with PageSpeed Insights before and after.
4. What is product page optimization? It means improving a product page so more visitors add to cart: clearer headline, better images and video, reviews near the button and answers to buyer objections.
5. What is a Shopify CRO audit? A review of your store's data and pages to find where visitors drop off, with a ranked list of fixes. Brand Scaling includes one in its Brand Growth Audit.

- Internal links: pillar DTC Brands (add on 12 Jan); service page /shopify-agency; siblings: Facebook Ads for Shopify and What Is ROAS; /roas-calculator.
- CTA: Book a Shopify store audit.

DTC Brands: 20 Brands Scaling With Meta Ads and What They Do

- Title (H1): DTC Brands: 20 Brands Scaling With Meta Ads and What They Do
- URL slug: /blog/dtc-brands
- Title tag: DTC Brands: 20 Brands Scaling With Meta Ads | Brand Scaling (59)
- Meta description: What DTC brands are and 20 examples scaling with Meta ads in 2026: their hooks, offers and formats from the Meta Ads Library, plus lessons to copy. (147 characters)
- Primary keyword: dtc brands (1,600 a month, +15% a year, -50% last 3 months)
- Secondary and question keywords: what is dtc brands; what does dtc brand mean; dtc brands examples; dtc brands list; best dtc brands 2026; top dtc brands in usa; what is dtc brand on tiktok; dtc brands uk; dtc brands in canada (all from Google autocomplete)
- Search intent: navigational and informational. People looking for a list of DTC brands and what makes them work.
- Target length: 3,500 words.
- Who it is for: DTC founders and marketers looking for proven patterns to copy, and journalists or analysts looking for a current list (a link and citation magnet).

Direct answer (opening paragraph):

DTC brands (direct-to-consumer brands) sell their own products straight to customers through their own website, usually on Shopify, instead of through retailers. Most grow with paid social. Below are 20 DTC brands actively running Meta ads in January 2027, with the hooks, offers and ad formats they use, checked in the Meta Ads Library.

Outline:

- H2: What does DTC brand mean?
  - Definition box; DTC vs wholesale vs marketplace in a 3-row table.
- H2: How we picked these 20 DTC brands
  - Method: US-based or US-selling DTC brands with 20+ active Meta ads on the check date, spread across skincare, supplements, apparel, home, jewelry, fitness, food and drink, pets. Write the check date. This method is what makes the list citable.

- H2: 20 DTC brands scaling with Meta ads
  - H3 per brand (20): category, active ad count on the check date, longest-running ad, main hook, main offer, format mix, one lesson. Link to the brand's Ads Library search.
  - Research task: shortlist 30 candidates (well-known DTC names plus Brand Scaling clients such as Dr. Naomi Skin, Juice Beauty and ionBottles only with client permission), verify each in the Ads Library, keep the 20 with the strongest evidence.
- H2: What the top DTC brands do differently
  - 6 patterns across the 20 (creative volume, founder or UGC faces, bundles, long-running evergreen ads, landing pages per angle, seasonal offers).
- H2: DTC brands on TikTok
  - Short section: which of the 20 also run TikTok Spark Ads.
- H2: DTC brands in the UK and Canada
  - 3 examples each, for the later market expansion.
- H2: How to apply this to your brand
  - Links: Meta Ads Library pillar, What Is ROAS, LTV:CAC, MER vs ROAS, Shopify Store Optimization, /growth.
- H2: FAQ
- CTA box: "Want your brand on next year's list? Book a Brand Growth Audit."

Content ideas:

- Data table of all 20: brand, category, active ads, longest-running ad in days, main format, main offer (original data, dated).
- Pattern chart: share of brands using UGC, founder videos, bundles.
- Ad screenshot gallery (one per brand) with credit and Ads Library link.
- Downloadable CSV of the table for journalists (supports digital PR in section 10).
- Embedded clip from the Meta Ads Library video showing how the data was collected.

FAQ:

1. What is a DTC brand? A DTC brand sells its own products directly to consumers, usually through its own website and social media, without wholesalers or retailers in between.
2. What are examples of DTC brands? Examples include the 20 brands in this list across skincare, supplements, apparel and home. Each one runs its own store and acquires customers mainly through paid social.
3. What does DTC stand for? DTC stands for direct-to-consumer. It is also written D2C.
4. How do DTC brands grow? Most DTC brands grow through paid social ads on Meta and TikTok, creator and UGC content, email and SMS retention, and later retail or marketplace expansion.
5. Are DTC brands still growing in 2026? Many are, especially those with strong margins and repeat purchases. Brands that relied on cheap ads without retention have had a harder time.

- Internal links: links down to all Cluster C posts (What Is ROAS, LTV:CAC for DTC Brands, MER vs ROAS, Shopify Store Optimization) and to the Meta Ads Library pillar; service pages /growth and home.
- CTA: Book a Brand Growth Audit.

7.4 Content production checklist

Run this for every post and pillar. Copy it into the tracker as one row per post.

1. Brief (Wednesday, week before): SEO lead fills the brief from 7.3, adds fresh autocomplete questions and any Search Console queries for related pages.

2. Draft (by Friday): writer follows the outline; every H2 question starts with a 40 to 60 word direct answer; at least one real number and link from a Brand Scaling case page.
3. Expert review (Monday): Gaurav or a senior media buyer checks claims, adds one personal insight per H2 and approves numbers.
4. Edit: plain English, no filler, no em dashes, short paragraphs, checks all facts against the source and adds the "date checked" for any platform feature.
5. On-page check (section 5): title tag under 60, meta under 155, slug, one H1, keyword in first 100 words, H2s from 3.3, alt text, internal links to pillar, service page and siblings, 2 to 4 external sources.
6. Schema: BlogPosting (author Person, datePublished, dateModified, image), FAQPage for the FAQ block, BreadcrumbList, VideoObject when a video is embedded.
7. Images: WebP, under 150 KB, descriptive file names, alt text, one custom header image, diagrams in the brand style.
8. Publish (Tuesday): check the prerendered HTML contains the full text (view-source), check mobile layout.
9. Request indexing: Search Console > URL Inspection > Request indexing.
10. Internal links back: add a link to the new post from its pillar and 2 older posts the same day.
11. Share: Facebook group (Ecom Inner Circle), Instagram @gauravecomm story and post, LinkedIn post by Gaurav, YouTube community post on @gauravecom, newsletter.
12. Add to tracker: URL, publish date, primary keyword, indexed (Y/N) after 3 days, position after 14 and 28 days.

8. AEO (answer engine optimization)

Answer engines (featured snippets, People Also Ask, Google AI Overviews and AI Mode) lift short, self-contained answers from pages they trust. How Brand Scaling wins them:

1. Direct answer under every question H2: the first paragraph after the H2 answers the question in 40 to 60 words, starts with the subject ("ROAS is...", "BFCM stands for..."), and does not depend on earlier paragraphs. Write it so it still makes sense if it is the only thing a reader sees.
2. Lists for process questions: "how to" H2s get numbered H3 steps or an ordered list with 5 to 8 items, each starting with a verb ("Open the Ad Library", "Pick the country").
3. Tables for comparison and numbers: ROAS vs ROI vs MER, break-even ROAS by margin, BFCM 2026 dates, Meta vs Google vs TikTok. Keep tables simple: 3 to 5 columns, header row, no merged cells, real HTML tables (not images).
4. Definition boxes: one shaded box under the H1 or first H2 of each post with a 1 to 2 sentence definition ("Marketing efficiency ratio (MER) = total revenue / total marketing spend"). This is the paragraph AI Overviews quote most.
5. FAQPage schema on every page with a FAQ block, using the exact visible questions and answers. Google shows FAQ rich results only for some sites, but the markup still helps machines read the Q and A pairs.
6. Original numbers: answer engines prefer a specific, sourced number. Brand Scaling has hundreds of real results on case pages; quote them with the case link ("$146,184 in 27 days on $40,123 spend, 3.64x ROAS").
7. Dates and freshness: show "Updated [date]" and write dates in the answers where they matter ("BFCM 2026 runs from Thursday 26 November to Monday 30 November"). Review every post every 6 months and the BFCM post every September.
8. Prerendered HTML: answer engines and AI crawlers must see the answer in the raw HTML. Until prerendering ships (section 2), none of this works.
9. Question coverage: use the exact autocomplete phrasing as the H2 when it reads naturally ("Is the Meta Ads Library free?").
10. People Also Ask expansion: once a page ranks in the top 20, search its main keyword in an incognito window, note the PAA questions shown, and add any missing ones as FAQs (log them in the tracker).

Snippet targets:

Question	Page	Format
What is a performance marketing agency?	Home	Paragraph

        "text": "We report on blended numbers first (MER, new customer CAC, contribution margin)
and on platform ROAS second, because platform ROAS alone over-credits ads."
      }
    }
  ]
}
```

9. AGO (AI visibility in ChatGPT, Perplexity, Gemini, Google AI Overviews)

AI assistants recommend agencies they can describe with confidence: a clear entity (who, what, where, for whom), the same facts repeated on the site and on third-party pages, and citable numbers. Today the site gives them almost nothing, because AI crawlers do not run JavaScript and see an empty page. Prerendering (section 2) is step zero for AGO too.

9.1 Entity setup

- Brand name to use everywhere: Brand Scaling. Legal name: Brand Scaling Hacks LLC. Alternate name: Brand Scaling Hacks. Never "BRAND SCALING" in caps in text, never "BSH".
- One-sentence description (use word for word on the site, schema, directories, social bios): "Brand Scaling is a DTC ecommerce growth agency that scales Shopify brands with Meta and TikTok ads, direct-response creative and conversion rate optimization, founded by Gaurav Kapoor."
- Facts from the site (use only these; fill in the rest):
  - Founder: Gaurav Kapoor, "eCommerce and Customer Acquisition Expert", 12+ years of ecommerce experience.
  - $50M+ in Meta ad spend managed; 30+ niches and industries; 150+ published case studies (align with the real count, see section 4).
  - Address shown in the footer: 27 W 24 Street, Suite 702, New York, NY 10010. [Confirm this is the current business address before using it in schema and directories.]
  - Profiles: YouTube @gauravecom, Instagram @gauravecomm, LinkedIn /in/gauravecom, X @gauravecomm, Facebook gaurav.kapoor.3994, Facebook group "Brand Scaling Hacks" (Ecom Inner Circle).
  - Founding year: [fill in]. Team size: [fill in]. Team locations: [fill in]. Email and phone for schema: [fill in].
  - Client brands shown on the site: Dr. Naomi Skin, Juice Beauty, Vedge Nutrition, ionBottles, Vanidox, Ayurda, Steel Horse Leather, Ghost Democracy, Talon, Tasgal, Swamp Kitten Jewelry, Little and Lively, Pure Skin Lab,

Veil Cosmetics, Water Jewelers, ZenSATION, EZ Detangler, Life Easy. [Confirm each client approves being named in third-party listings.]

About page outline (/about):

- H1: About Brand Scaling and Founder Gaurav Kapoor
  - Intro (50 words): the one-sentence description plus the 3 headline facts.
- H2: What Brand Scaling does
  - Services in one paragraph each: Meta ads, TikTok ads, Google Shopping and Performance Max, creative and UGC, Shopify CRO, retention.
- H2: Who we work with
  - $20K to $2M+ a month DTC brands; niches; logo wall with names in text.
- H2: Gaurav Kapoor, founder
  - H3: Background and 12+ years in ecommerce [fill in: career milestones, where he is based].
  - H3: Results: $50M+ ad spend managed; 3 signature cases with links ($2.3M at 11.6x ROAS; $1.6M at 11.98x; $148,000 in a single day in a $294K month).
  - H3: Teaching: YouTube @gauravecom, the free Facebook group, live masterclasses (the "$100K Brand Scaling LIVE Event: Advanced Facebook Ads" and others listed on the site).
- H2: How we work
  - Foundation, Test, Optimize, Scale (link /growth).
- H2: Company facts
  - Table: Legal name, Founded, Headquarters, Founder, Services, Markets served (US, UK, CA, AU), Contact.
- H2: Press, podcasts and mentions
  - List with links as they come in (section 10).
- H2: FAQ (reuse the site FAQ)
- CTA: Book Your Brand Growth Audit.

# Brand Scaling

> Brand Scaling (legal name Brand Scaling Hacks LLC) is a DTC ecommerce growth agency that scales
Shopify brands with Meta and TikTok ads, direct-response creative and conversion rate
optimization. Founded by Gaurav Kapoor. 12+ years of ecommerce experience, $50M+ in Meta ad spend
managed, 30+ niches, 150+ published case studies. Serves brands in the United States, United
Kingdom, Canada and Australia.

Brand Scaling works with DTC and ecommerce brands doing about $20K to $2M+ per month in revenue
with product-market fit, typically spending at least $10,000 to $20,000 per month on paid ads.
Engagements start with a Brand Growth Audit: a 1-on-1 diagnostic of Meta ad accounts, creative
performance, conversion bottlenecks and unit economics.

## Services
- [Ecommerce growth agency](https://brandscalinghacks.com/growth): Meta, TikTok and Google media
buying, creative, Shopify CRO and retention as one system
- [Performance marketing agency for ecommerce](https://brandscalinghacks.com/): overview, results
and process (Foundation, Test, Optimize, Scale)
- [Shopify agency](https://brandscalinghacks.com/shopify-agency): store builds, product page
optimization, offers, checkout and CRO testing
- [Direct-response video creatives and UGC](https://brandscalinghacks.com/viral-creatives): 30 to
50+ angle iterations per month
```

```
## Proof
- [Case studies](https://brandscalinghacks.com/case-studies): verified revenue and ROAS results
from client ad accounts
- Example results: $2.3M in sales at 11.6x ROAS on $200K ad spend; $1.6M on $140K ad spend at
11.98x ROAS; $146,184 in 27 days on $40.1K spend for a skincare brand

## Tools
- [Free ROAS calculator](https://brandscalinghacks.com/roas-calculator): break-even ROAS and profit
per order

```

Add each guide line only after the post is live, so the file never lists a 404.

9.3 Where to get listed and mentioned

Agency directories and review sites (consistent name, description, logo, URL, services, minimum budget "$10,000+ per month ad spend"):

- Clutch (categories: Social Media Marketing, PPC, Ecommerce Marketing). Ask 3 to 5 clients for verified Clutch reviews in M2 and M3.
- DesignRush, GoodFirms, Sortlist, UpCity, Agency Spotter.
- Shopify Partner Directory and Shopify Plus partner listing, only if Brand Scaling holds that status [fill in].
- Meta Business Partners directory, only if eligible [fill in].
- TikTok Marketing Partners, only if eligible [fill in].
- Trustpilot or Google reviews for the brand: ask happy clients after each strong month.
- LinkedIn company page for Brand Scaling (separate from Gaurav's profile) with the same description.
- Crunchbase company profile with founder linked.

Communities (helpful answers, not link drops; link only when the post answers the question better than a reply can):

- Reddit: r/shopify, r/ecommerce, r/FacebookAds, r/PPC, r/DTC. Answer Meta Ads Library, Andromeda and ROAS questions; Gaurav's account, disclosed.
- Facebook: Brand Scaling Hacks group (own) plus large Shopify and Facebook ads groups.
- Quora: ROAS, LTV:CAC, BFCM questions.
- X and LinkedIn: weekly case breakdowns with one chart.

Podcasts (Gaurav as guest, pitch angle "how we scaled a brand to $2.3M at 11.6x ROAS" or "what Meta Andromeda changed for DTC"):

- DTC and ecommerce shows such as 2X eCommerce, Honest Ecommerce, Ecommerce Fuel, The Ecommerce Playbook, Limited Supply, Shopify Masters, Perpetual Traffic. [Check each show still accepts guests.]

Comparison listicles to get into (search each phrase, list the ranking pages, email the authors with a short fact sheet and proof):

- "best performance marketing agencies for ecommerce", "best Meta ads agencies for DTC", "best Shopify agencies", "best Facebook ads agencies for Shopify", "best TikTok ads agencies".

9.4 Citable assets to publish

- Client ROAS by niche table (from case pages), updated quarterly, on the What Is ROAS post and as a standalone /benchmarks section later. Always label as "Brand Scaling client accounts".
- BFCM results recap: publish in December a short post or case page "What our clients' BFCM 2026 numbers looked like" (aggregate spend, revenue, ROAS, best day), with permission.
- DTC Brands list with the dated Meta Ads Library data (20 brands, active ad counts, longest-running ads) and a downloadable CSV.
- Case studies with numbers: rewrite the top 20 case pages with spend, revenue, ROAS, timeframe, niche and "what we did" in text.
- Pricing and engagement page section: minimum ad spend, what the audit includes, typical timeline (7 to 14 days setup, 2 to 4 weeks to first results). AI assistants answer "how much does an agency cost" and need a source.
- Free ROAS calculator (exists): add the formula and an example in text so it can be quoted.
- YouTube transcripts: publish the transcript of the Meta Ads Library video on the pillar page.

9.5 Prompt tracking

Check these prompts on the first Monday of every month in ChatGPT (with search), Perplexity, Gemini and Google AI Mode, logged out or in a clean profile, US location.

1. What are the best performance marketing agencies for ecommerce brands?
2. Recommend a Meta ads agency for a Shopify skincare brand doing $100K a month.
3. Who are the best Facebook ads agencies for DTC brands in the US?
4. Which agencies do Meta ads, creative and Shopify CRO together?
5. Best Shopify agency for scaling a DTC brand with paid ads?
6. How do I use the Meta Ads Library to find winning ads?
7. What is Meta Andromeda and how should ecommerce brands change their ads?
8. What is a good ROAS for an ecommerce brand on Meta?
9. How should a Shopify brand plan Meta ads for BFCM 2026?
10. MER vs ROAS: which should I use to set my ad budget?
11. Who is Gaurav Kapoor (Gaurav Ecom)?
12. Is Brand Scaling (brandscalinghacks.com) a good agency?

Tracking table template (one row per prompt per tool per month):

Prompt	Tool	Brand mentioned (Y/N)	Cited URL	Competitors named
Best performance marketing agencies for ecommerce	ChatGPT	N	none	[list]
Best performance marketing agencies for ecommerce	Perplexity	N	none	[list]
Best performance marketing agencies for ecommerce	Gemini	N	none	[list]

Prompt	Tool	Brand mentioned (Y/N)	Cited URL	Competitors named
Best performance marketing agencies for ecommerce	Google AI Mode	N	none	[list]
How to use the Meta Ads Library	ChatGPT	[Y/N]	[URL]	[list]

What to do with the results: if a competitor is named and Brand Scaling is not, open the URLs the tool cited. Those pages (listicles, directories, Reddit threads) are the outreach list for section 10.

10. Links and authority

Monthly targets (quality over count; every link from a real site with real traffic in ecommerce, marketing or business):

Month	Directory and profile links	Guest posts and contributed articles	Podcasts	Digital PR and expert quotes	Partner and client links	Total new referring domains
M1 (22 Oct to 13 Nov)	6	0	1 pitched	2	1	8
M2 (16 Nov to 11 Dec)	4	1	1	3	1	10
M3 (14 Dec to 8 Jan)	2	2	1	3	2	10
M4 (11 Jan to 5 Feb)	2	2	2	4	2	12

Link types for this niche:

- Directories: the list in 9.3. Fill every field, same description, add 3 case studies and a logo.
- Guest posts: ecommerce and marketing blogs that accept expert articles (app partner blogs in the Shopify ecosystem, email and SMS platforms, reviews apps, ecommerce publications). Topics: "What Meta Andromeda changed for Shopify brands", "Break-even ROAS: the number most brands get wrong", "BFCM: what we learned from $112,866 in 13 days". One link to the matching pillar, one to the author bio.
- Podcasts: list in 9.3. Each episode gives a show-notes link and a transcript mention. Repurpose clips for Instagram and YouTube Shorts.
- Partner pages: tools the agency uses daily (Shopify apps, email and SMS platforms, attribution tools, UGC platforms) often have partner or agency directories. Apply where Brand Scaling is a real user or partner.
- Client links: ask clients to add "Growth partner: Brand Scaling" in their site footer or about page, or to give a testimonial on the partner's site with a link (never as a condition of service).
- Digital PR with original data: the DTC Brands list (dated, with CSV) and the client ROAS by niche table are the two data assets. Pitch them to ecommerce and marketing reporters in January with a 3-bullet summary and one chart.
- Expert quote platforms: Qwoted, Featured, Help a B2B Writer, Source of Sources. Gaurav answers 3 to 5 queries a week on Meta ads, ecommerce, BFCM and DTC. Keep answers 100 to 150 words with one specific number from a case.
- YouTube: every @gauravecom video description links to the matching blog post or service page; pin a comment with the link.

Outreach email template (short):

```
Subject: Data for your [topic] piece: [one-line hook]

Hi [Name],

I read your [article title] and liked the section on [specific point].

We run Meta and TikTok ads for DTC brands at Brand Scaling. We just published
[asset name], which shows [one specific finding with a number, for example:
"20 DTC brands scaling on Meta, with how long their best ads have run"].
```

```
If it helps your readers, feel free to use the table or quote it. Happy to add
a comment from our founder Gaurav Kapoor ($50M+ in Meta ad spend managed).

[Link]

Thanks,
[Name], Brand Scaling
```

What never to do:

- Buy links, link packages or "guest posts" from sites that exist only to sell them.
- Private blog networks (PBNs) or expired domains redirected to the site.
- Link exchanges at scale or reciprocal link pages.
- Sitewide footer links in client stores with exact-match anchors.
- AI-spun articles on low-quality sites, comment spam, forum signature spam.
- Fake reviews on Clutch, Trustpilot or Google. One discovered fake review can undo the trust the whole plan builds.

11. Monthly cadence, tracking and targets

Weekly routine:

Day	SEO lead	Writer and designer	Developer
Monday	Search Console check: new queries at positions 8 to 20, indexing errors, Core Web Vitals; update tracker; review next post with Gaurav	Edit the post for Tuesday; finish images	Fix any errors from the Monday check
Tuesday	Publish the post, request indexing, add internal links back, share	Start next week's draft	Deploy post and any page updates; verify view-source
Wednesday	Write next week's brief; 1 directory or outreach batch (10 emails)	Draft	Case page batch (5 rewritten cases, slugs and 301s)
Thursday	Expert quote platforms (3 to 5 answers by Gaurav); community answers	Draft; diagrams	Speed and schema fixes
Friday	Rank check for the posts published 14 and 28 days ago; AI prompt spot-check (2 prompts)	Draft due	Weekly crawl for broken links and 404s

Monthly (first Monday): keyword refresh (3.1), full AI prompt tracking (9.5), backlink review, report to Gaurav.

Monthly report fields:

- Indexed pages (Search Console > Indexing > Pages) vs submitted.
- Organic clicks, impressions, CTR and average position (Search Console), month vs previous month.
- Top 10 queries and top 10 pages by clicks.
- Keywords in top 3, top 10 and top 20 from the 3.2 list.
- New posts published, posts updated, case pages rewritten.
- Organic sessions and key events (GA4: book audit clicks, form submits, newsletter sign-ups), organic leads and booked calls.
- New referring domains and notable links.
- AI prompt results: number of prompts where Brand Scaling is mentioned, by tool, and cited URLs.
- Core Web Vitals status (mobile).
- Next month's priorities (3 bullets).

Targets (estimates, depend on the technical release shipping by Fri 30 Oct):

Metric	Baseline (22 Oct 2026)	End of M2 (Fri 11 Dec 2026)	End of M4 (Fri 5 Feb 2027)
Indexed pages (main pages, posts and rewritten cases)	[from baseline export]	40	70
Keywords from 3.2 in top 10	[from baseline]	3	12
Keywords from 3.2 in top 3	[from baseline]	1	4
Organic clicks per month	[from baseline]	400	1,500
Organic leads per month (audit bookings and forms)	[from baseline]	2	6
AI prompts (of 12) where Brand Scaling is mentioned in at least one tool	0 (assumed until first check)	1	3
New referring domains (cumulative)	[from baseline]	18	40

Most likely early winners: long-tail Meta Ads Library questions, "meta andromeda" questions, "performance marketing agency for ecommerce" and the BFCM post during Cyber Week. "meta ads" and "shopify agency" are 6 to 12 month targets.
